

## Intelligent Edge

The release of Dynamics GP 2018 R2 added “Intelligent Edge” functionality which is essential for communication with the Intelligent Cloud. This feature creates a bridge for on-premises systems like GP, SL, and NAV to communicate with the cloud and move data to programs like Power BI, Flow, and Dynamics Business Central.

## Dive Into Your Data

When the connection is made, we securely replicate your on-premises data to the intelligent cloud. You simply decide which companies you want to replicate (all if you choose), and then, within the main pages of your on-premises solution, we’ll deliver back actionable analysis and content.
