CloudLIMS
Empowering Labs

Streamline and Automate Clinical Lab Workflows With an Out-of-the-box SaaS LIMS

Key Benefits

Patient Portal
Enable patients to self-register on the portal, place test requests, associate themselves with physicians, and download test reports as soon as they are released by your laboratory.

Physician Portal
Enable physicians to enter patient data, print sample labels, associate patient records with samples, place diagnostic test requests, track request status in real-time, download test reports and invoices.

Manage Samples:
Securely store annotated specimen data, track specimens using barcodes, print labels, maintain specimen Chain of Custody (CoC), and manage all aspects of specimen genealogy, including aliquots, derivatives, and pooled specimens.

Manage Patients:
Seamlessly manage patient data, demographic details, clinical history, and patient consent, anonymize sensitive patient data, to meet ethical and legal requirements.

Manage Tests:
Manage clinical diagnostic tests and their results, maintain test CoC, validate test results, automate the calculation of complex test results, analyze trends based on test results, and generate professional custom test reports. You can release test reports in a batch to patients and physicians.

Follow Regulatory Compliance:
Follow HIPAA, CLIA, CAP, EU GDPR, ISO 15189:2012, GCP, and 21 CFR Part 11 with ease.

Manage Staff Training:
Manage training and competency records of laboratory personnel and generate staff competency reports.

Manage Instruments:
Manage records of instruments, schedule instrument calibration, and perform preventive maintenance. CloudLIMS helps you maintain calibration and maintenance results, in addition to integrating instruments to directly load results.

Manage Kits:
Manage and configure kits, design barcodes for kits, and print labels. You can set reminders to receive alerts if the current number of kits is less than the specified quantity, ensuring timely ordering of kits.

Manage Workflows:
You can configure workflow templates using a series of steps to mirror your laboratory workflows.

Manage Inventory:
Manage laboratory inventory such as reagents and other consumables, import inventory records from a file, or simply scan barcodes to add new items to your inventory.

Manage Studies:
Manage clinical studies, associate them with samples, patients, and study in-charge, and generate custom study reports.
