

# Test Management

Make software quality your superpower with unified test case management

## End-to-end test management for manual and automated testing

With BrowserStack Test Management, you can create, manage, and track your manual & automated test cases using simple, integrated workflows and powerful dashboards. Ensure high-software quality with real-time insights into all your releases. Say goodbye to the hassle of scattered testing efforts, and experience the power of unified test management.

[Learn more](#) about BrowserStack Test Management

### Centralized test case repository

Create manual and automated test cases at lightning speed with in-built templates. Manage them effortlessly on a single platform using folders and tags.

### Quick and easy import

Easily import test data from an existing test management tool or CSV files. Import thousands of test artifacts in a few clicks by leveraging APIs. Add custom fields on-the-fly while importing data from CSV files. Smart parsing of import files to create and update test cases.

### Powerful Jira app

Easily track test cases & test runs through two-way binding via Jira App & have any changes reflected effortlessly in Test Management. With our two-way Jira binding, all your test cases & test runs are visible and manageable in both Test Management & Jira. Achieve better traceability by tracking test cases & test runs through two-way binding using the Jira app.

### Test run management

Plan what needs to be tested across manual and automated test cases and track the status of each execution in real time with test runs. Easily upload automation test results either from BrowserStack Test Observability or from any of your favorite test automation frameworks through JUnit-XML/BDD-JSON reports.

### Dashboard and reporting

Never miss a beat on your manual testing and test automation with a rich dashboard and advanced analytics. Get a high-level overview or drilled-down details of your test cases and test runs through dashboards and reports. Gain deeper insights into the performance and quality of your tests with BrowserStack Test Observability.

### Create test cases effortlessly

Seamlessly navigate between folders and tests, add results, and link issues with fewer clicks and page loads. Easily search, sort, and filter test cases with pre-defined parameters.

### Leverage out-of-the-box in-built templates

Ready-to-use standard test case fields like ID, title, owner, preconditions, and steps covering most of the test case requirements.

### Gain complete visibility into all your releases

Track the status of every release with powerful dashboards and get complete visibility into each release and test run.

## CI/CD integrations

Jenkins

CircleCI

Azure

GitHub

Bamboo

## Automation frameworks

TestNG

Cucumber

WebdriverIO

Nightwatch.js

Cypress

Mocha

Selenium

Playwright

*If you are looking for a modern test management solution, I can recommend Test Management by BrowserStack. The UI looks clean and friendly to get started with. Import features are easy to understand. Dashboard charts are useful.*
