365ContainerImport
for Dynamics 365 Business Central

Manage and track every aspect of your container imports and inventory in **real time.**

Wish you could easily consolidate multiple purchase order items into aggregated containers?

Are you ready for full visibility into your imports throughout the transit process in one place?

When you import or transport goods overseas, container management can be extremely complicated and inefficient. 365ContainerImport by Western Computer eliminates the challenges of consolidating, tracking and controlling inventory from embarking point to final destination.

An ideal solution for distributors, retailers or any company importing goods via containers—365ContainerImport is a powerful tool designed to give you all the information and functionality you need at your fingertips within Business Central.

Western Computer Solves Your Challenges

When it comes to optimizing your business, Western Computer is the partner you can depend on. You'll gain a nationwide team of senior-level experts who speak your language from day one with proven experience in your industry. Our passion is creating solutions for real-world challenges and empowering people to succeed.

Discover the Advantages of **Fully Integrated Inbound Container Management** for Business Central

- Gain real-time visibility and traceability throughout transport

- Easily consolidate multiple items and purchase orders into a single container

- Transfer inventory ownership while in port or on the water

- Apply item charges by volume, quantity, or weight for accurate landed costs by item

- Track detailed status of containers on various shipping vessels

- Simplify cost allocations, drop shipments, transfers and more

- Support domestic and international imports with one solution

- Track capacity of containers with running totals of loads and available capacity remaining

- Optimize and automate processes to reduce manual entry and errors

- Provide employees with anytime, anywhere access from any device

- Senior-level Western Computer industry experts and support team

CONSOLIDATED
Consolidate items across multiple purchase orders into containers for easier receiving and tracking.

ACCURATE
Automate manual tasks, reduce errors and track true landed costs for all imported goods.

EFFICIENT
Manage all aspects of your containers in one place with optimized workflows and entry.

365ContainerTransport
ADDITIONAL FEATURES & FUNCTIONALITY

TRANSPORT ORDER COST ALLOCATION

Assign default cost allocations to the Container Code, overriding defaults on the Transport Order prior to posting, as well as Invoice reconciliations.

DROP SHIPMENT

Delay the creation of a Transfer Order and ship items directly to the customer from the In-transit Container location.

FINAL DESTINATION TRANSFERS

Assign a final destination to Transfer Order lines and the Transfer Receive posting will create a Transfer Order from the receiving location to the final destination location.

LOT NUMBER REASSIGNMENT

Reassign lot number during transfer receipt.

DATA NAVIGATIONS

Pass data deeper in your ledgers including Item Ledger, Value Entry, G/L Entry and Reservations Entry.

CONTAINER ROLE CENTER

Empower your logistics teams with a simple dashboard to view and manage the container process and documents.
