

Women's Bean Project Transitions from Scribe to SmartConnect

30+ Minutes saved with
each large import

250 Transactions a day
previously entered
manually

Scenario

Women's Bean Project has used Microsoft Dynamics GP as part of their social enterprise since 2011. They are unique as they aren't only a non-profit, but also a manufacturer.

Knowing integration between their business applications could save time and reduce errors, Women's Beans Project implemented Scribe and were happy with the efficiencies it created.

In addition to their online store, they also import all Amazon and Gifts for Good orders, information from their donation platform and corporate uploaders.

During their busy time, they previously entered between 150-250 transactions a day in Dynamics GP and as well as tracking numbers to the associated sales platforms.

The Problem

The complexity of their integration solution forced the Women's Beans Project team to rely on their Dynamics GP partner to maintain their existing integrations and build additional integrations.

As a non-profit organization, Women's Beans Project is always looking for ways to reduce costs. They reached out to their partner, Njevity, to look for ways to reduce costs associated with their integrations.

“It’s so much faster to import large orders using SmartConnect. With Scribe, we’d upload and walk away for 30 minutes. SmartConnect accomplishes the same import in five minutes.”

Anne Davis, Controller at Women’s Bean Project

The Solution: SmartConnect

The thought of creating and performing integrations can sometimes be overwhelming. Moving their existing integrations from Scribe to SmartConnect proved to be a great learning opportunity for Anne, as she quickly gained the knowledge she needed to be able to configure new integrations and manage existing integrations.

“When using Scribe, Anne and her team were relying heavily on us for setting up, maintaining and updating integrations, as well as troubleshooting errors. SmartConnect is such a user-friendly interface. It gives them the ability to do all these things on their own now, which saves them valuable time and money.” says KJ Krueger, Senior Application Consultant at Njevity.

Women’s Bean Project continues to identify opportunities to increase efficiency and better serve their vendors using SmartConnect. “Being a social enterprise where we have so many avenues for sales, it’s nearly impossible for everything to be integrated but you have to make it work as efficiently as possible for everyone involved and SmartConnect has done that for us.”

About Women’s Bean Project

In 1989, Josepha “Jossy” Eyre, had a vision of helping women achieve independence and self-sufficiency through long-term employment.

Using \$500 of her own money, Jossy founded Women’s Bean Project, a non-profit organization that provides on-the-job training and life skill classes to help women identify their talents and launch their careers.

Women’s Bean Project sells baking mixes, coffee and tea, dog treats as well as snacks and spices in nearly 1,000 stores as well as their online shop, Amazon and Gifts for Good.
