

Backup and restore Google Workspace data

Protect your organization's data from accidental deletion and malicious users and enable mass restoration in the event of a cyber attack

Threat levels are rising

Malicious incidents have doubled in some sectors due to the advances in AI, enabling criminals to conduct increasingly sophisticated attacks.

Data protection regulations such as NIS II and DORA also put pressure on organizations to bolster their data resilience and integrity strategy.

Cyber crime continues to rise in scale and complexity, affecting essential services, businesses and private individuals alike. Cyber crime costs the UK billions of pounds, causes untold damage, and threatens national security.

— National Crime Agency

Google does not protect your data

Google Workspace is a secure platform, but cannot protect you from data loss: there are no automatic backups beyond 30 days, no effective mass restoration mechanism and protection against accidental deletion and malicious users is limited. Google Vault is not sufficient either. It wasn't designed as a backup tool and therefore its exports aren't designed for large-scale or high-volume data backups.

To properly protect your data, Google recommends the use of a third-party backup and recovery solution like CloudM Backup.

CloudM Backup is a powerful backup and recovery solution for Google Workspace that protects against accidental deletion and malicious users. It is built on CloudM's proven, secure and fast migration technology that is used by over 45,000 customers worldwide.

Backup combines everything that CloudM does brilliantly - migration and automation - into a product that will help a lot of organizations easily combat the consequences of data loss.

— Paul Young, Head of Collaboration & Communications Digital Solutions, Holcim

Backup and restore Google Workspace data

BACKUP

Improve your organization's data resilience and minimize data loss

CloudM Backup backs up your data in flexible intervals of up to 20 minutes and only syncs new and updated files, making it faster, more reliable and less resource-intensive than other solutions.

RESTORE

Ensure business continuity in the event of a cyber attack or data loss

En masse or granular restoration options enable you to restore any version of your data from any point in time, ensuring your organization is up and running again as quickly as possible.

Be in control

Take full control of your data by hosting backups in your own infrastructure, avoiding vendor lock-in

Be more productive

Reduce manual tasks by automating the assignment of backup and retention policies

Stay compliant

Benefit from bespoke retention policies for dynamic groups to ensure compliance with data regulations

Expert support

24/7 support from experienced developers, solution architects and account managers
