

Stop breaches with continuous attack surface management

If you don't know what your attack surface looks like, how can you protect it? Intruder continuously monitors your attack surface, highlighting exposures that traditional scanners miss and proactively protects you when an asset changes or a new threat is discovered.

See and secure your attack surface

Intruder helps you automatically uncover your internet-facing assets - even those you don't know about. Search for everything within your attack surface to see what's exposed and get the visibility you need to stay ahead of attackers.

Key features:

- Detect new systems deployed in the cloud
- Automatically discover APIs
- Find unknown subdomains and related domains
- Automated web application firewall (WAF) detection
- Manage your attack surface

Close the window of opportunity for attackers

Check for vulnerabilities and respond dynamically to changes in your environment and the threat landscape. Intruder is powered by multiple leading scanning engines, so you can scan and secure your entire infrastructure and applications in one platform.

Key features:

- 24/7 monitoring for emerging threats
- Agent-based internal scanning
- Authenticated scanning for web apps and APIs
- Output from multiple scanning engines including **170,000+ infrastructure checks** (Tenable), **1000+ attack surface checks** (Nuclei), **75+ application checks** (ZAP)

Fix what matters most

Receive prioritized results underpinned by machine learning and Intruder's team of security experts. Monitor your team's remediation efforts and easily analyze, track and report on the performance of your vulnerability management program over time.

Key features:

- Gain insight into the likelihood of a vulnerability being exploited within the next 30 days
- See which targets are most vulnerable to prioritize fixes
- Track your team's time-to-fix with industry benchmarks

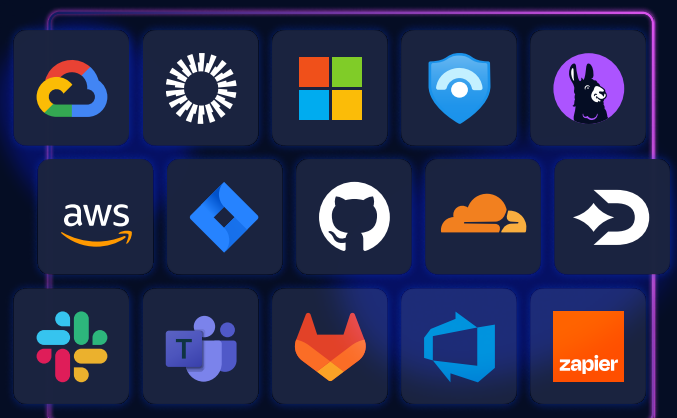

Challenges with visibility result in businesses tracking **just 21% of their internet-facing assets** as part of ongoing vulnerability management programs

— Intruder Research

Proactive threat protection

"When Log4j hit, our CIO asked if we were affected. I could tell him straight away: **We're good - Intruder's scanned for it and we're in the clear.**"

— Sunil Patel, InfoSec Officer at River Island

About Intruder

Intruder has been on a mission to help organizations reduce their cyber attack exposure by providing effortless cyber security. We're proud to help 3,000+ customers worldwide, be awarded Deloitte's Fast 50 and placed on the Financial Times' list of Europe's 1,000 fastest-growing companies.
