

Case Study

SALSA JEANS

SALSA JEANS

Centralized
management of
maintenance operations
and control of SLAs

Nextbitt

Salsa Jeans was looking for a solution that would **centralise and optimise maintenance management** for all its stores in the Iberian Peninsula, facilitating control and rapid response to maintenance, incidents and emergencies.

The high number of stores and the diversity of processes created significant challenges for the management of Salsa Jeans' maintenance operation. This increased the complexity of management and made it difficult to control the Service Levels agreed with the providers.

The Solution

- ✓ Centralization of Maintenance Operations
- ✓ Reduced Communication and Improved Efficiency by Nearly 90%
- ✓ Easy Access to Technical Documentation
- ✓ Automation and Scheduling of Preventive Maintenance

Result

- Enabled **Salsa Jeans** to operate more effectively
- Reduced response time
- Full control of maintenance operations
- Greater efficiency and satisfaction of teams

"With the Nextbitt platform, the analysis and response time has improved considerably, and we know that 'time is money'.
In addition, today, 100% of our preventive maintenance is automatically scheduled, which ensures efficiency and total control.

Luís Rodrigues

Head of Construction and Maintenance at Salsa Jeans
