# Proactive endpoint security for the hybrid world

## Protect, prevent and manage. Everywhere.

The shift to **hybrid work** has fundamentally reshaped cybersecurity, creating a vastly **expanded attack surface.** Employees accessing sensitive data from anywhere on diverse devices (laptops, smartphones, tablets) turns every network into a potential vulnerability. Think:

Increased cyber threats

Blurred perimeters

Data security risks

Device chaos

Credential theft

TIME TO REACT! Traditional tactics aren't enough. You need a **proactive, adaptive security strategy** to protect devices, data, and identities.

Introducing Prey:

Unified control for remote and hybrid workforces

Prey provides a **centralized platform** that simplifies remote security management, giving IT and Security teams full control over their entire device fleet.

- **Simplify remote security:** Secure and monitor all endpoints from a single dashboard.

- **Ensure seamless protection:** Extend security beyond traditional office boundaries with real-time visibility.

- **Automate compliance mitigate risks:** Enforce data protection policies and prepare for compliance effortlessly.

- **Stop fixing, start preventing:** Built for the modern workforce to proactively secure your assets.
