Beyond Backup: Intelligent Tools for Smarter Salesforce Management

Spotlight on: Auditing • Metadata • Sandbox Seeding

Sesame Software's Backup & Recovery platform doesn't just protect your Salesforce data – it gives you the tools to manage, verify, and extend it across your org. From audit-ready integrity checks to smart sandbox seeding, we help you do more with your data, without the overhead.

Audit Feature: Verify Your Backups Without the Bloat

Don't just assume your data is intact – confirm it.

• Compare your backup data to the current Salesforce records

• Run audits by full history or specific backup date

• Automatically identify missing or changed records

• Only update what's necessary – no full refresh required

• Ideal for compliance checks, internal QA, or peace of mind

Save time. Reduce risk. Prove your backups work.

Metadata Awareness: Your Structure Matters

Your data is only part of the story – metadata (fields, layouts, permissions) is essential for accurate restores and full visibility.

• Capture **Salesforce metadata** alongside your data

• Ensure accurate structure in backup and recovery scenarios

• Understand object relationships and schema changes over time

• Useful for restores, migrations, and audits

See the full picture – not just the rows.

Sandbox Seeding: Smarter Test Environments, Faster

Quickly populate Salesforce sandboxes with real data – without risking production or starting from scratch.

• Choose specific objects or relationships to seed

• Mask or filter sensitive fields for dev/testing environments

• Pull from any point in backup history

• Great for QA teams, developers, or UAT testing

Accelerate testing without compromising data control.

Built Into Every Backup Plan

No need for add-ons or external tools – auditing, metadata, and sandbox seeding are built right into Sesame's platform. Whether you're restoring, testing, or reporting, you've got what you need to move fast and stay secure.

Sesame checks them all.

Get flexible, fast Salesforce backup – without the complexity.
