

ORY

Ory Overview

Modern IAM built for
the modern business

The challenge: The limits of legacy IAM

Organizations worldwide are hitting critical limitations with outdated identity infrastructure. Legacy IAM and CIAM platforms now create more problems than they solve. Organizations hit critical barriers that impact growth, security, and user satisfaction:

- **Poor user experience:** Cumbersome authentication flows drive customer abandonment and user frustration
- **Security vulnerabilities:** Identity-related breaches continue rising as legacy systems struggle with modern threat vectors
- **Operational complexity:** Managing compliance across multi-region and multi-cloud environments with patchwork solutions creates costly bottlenecks
- **Scaling barriers:** Monolithic architectures and vendor lock-in prevent organizations from adapting to growth or changing requirements

The Ory solution: Modern, modular, flexible Identity Access Management (IAM)

Ory offers a comprehensive identity and access management (IAM) ecosystem with modular components that handle every aspect of modern authentication and authorization. You can mix and match these services, and deploy Ory to fit your business's needs:

ORY / Network

Fully managed solution — A regional control plane and a multi-tenant database all orchestrated within a Kubernetes Cluster on the Google Cloud Platform infrastructure — feeding into an ML pipeline.

ORY / Ory Enterprise License

Self-hosted (cloud or on-prem) — Take complete control of your identity infrastructure. Ory offers complete architectural flexibility to deploy Ory's components according to your business and security requirement.

About Ory

- **Founded in 2019** and built on open standards: OAuth, OIDC, SAML, SCIM
- **HQ in Scottsdale, AZ USA** with global offices in London, UK and Munich, Germany

Balderton.

Ory offers a modern and modular IAM solution that scales, provides unmatched UX, deployment flexibility – and only charges for what is used.

The Ory Ecosystem

ORY / Hydra

OAuth2 & OIDC

SSO and federated login for platforms and enterprises, app and device auth for media and streaming, along with Auth0 interoperable APIs for seamless migration.

ORY / Polis

Organizations

SAML to OIDC bridge and Directory Sync. API integration for Enterprise SSO and user lifecycle management based on SAML/ OIDC, and SCIM-based protocols.

ORY / Keto

Permissions

Fine-grained authorization and relationship-based access control based on Zanzibar, with tailored permission languages for enterprise use cases, and ultra-low latency.

ORY / Kratos

Identities

Secure and reliable MFA, frictionless PassKeys and passwordless options, and the flexibility for users to fully customize their authentication experience.

ORY / Oathkeeper

Access Proxy

Identity & Access Proxy / API (IAP) and Access Control Decision API. Authenticate, authorize, and mutate incoming HTTP(s) requests.

OpenAI

Building a truly modular system that meets customers where they're at is a lot of work. It takes a certain level of business and product maturity to be able to do that in a flexible way."

Benjamin Billings

Engineering Manager, OpenAI

Trusted in open source & enterprise
