

Real Results from WebWork Customer Companies

WebWork helps every team scale smarter—with accuracy, transparency and measurable results.

From tech startups to global consultancies, teams across industries are transforming the way they track time, manage productivity, and scale operations with WebWork.

Here are three customer stories from three companies using WebWork:

Metaviz

A fast-growing software and AI firm, switched from Hubstaff to WebWork and achieved a 25% boost in productivity, faster client billing, and seamless time tracking across devices and time zones.

“

MID Construction Group

Replaced both Hubstaff and Jibble with WebWork, gaining full visibility into their offshore workforce while cutting time tracking costs by ~50%.

“

IGENIEUX

A scaling outsourcing consultancy, streamlined hiring, payroll, and productivity management through WebWork's all-in-one solution—turning fragmented processes into a unified system that supports rapid growth.

“

Metaviz: From Hubstaff to WebWork— Smarter Scaling for a Growing Dev Team

Industry	Web and Software Development
Work Mode	On site & hybrid
Team Size	40+

Metaviz Pro, a fast-growing software and AI services firm, needed a reliable and cost-effective way to track team productivity across departments. After facing platform issues and high costs with Hubstaff, they found a better fit with WebWork.

"With WebWork, we finally have a clear view of what our team is working on. It's reliable, easy to use, and saves us hours every month on reporting and client billing."

– Zain Ali, Full Stack Engineer at Metaviz

The Challenge Before WebWork

"As the team expanded, it became impossible to monitor everyone's activity at a micro level. We needed a tool that could show us exactly which applications were being used and whether time was spent productively."

– Zain Ali, Full Stack Engineer at Metaviz

As Metaviz Pro grew its team and project base, managing productivity and verifying employee output became increasingly difficult. The company was scaling fast but their tools weren't keeping up.

• Limited Visibility into Team Activity

With over 40 employees, Metaviz needed more than just clock-in data. They needed real insight into how work hours were being spent. Manual oversight was no longer sustainable, and without a centralized system to monitor activities, managers struggled to ensure teams were focused and productive.

• Frustrations with Hubstaff

Before switching to WebWork, the team tried using Hubstaff on a Starter Plan, but it quickly became apparent that the solution wasn't working:

- Too expensive for long-term use
- Apps on Windows and Mac didn't sync correctly with the dashboard
- Time zones were misaligned, causing inconsistencies in tracked hours
- The platform required constant manual verification, undercutting productivity

Zain also explored other trackers, but many suffered from the same core problems: buggy performance, poor UX, and inaccurate time reporting. The team needed something reliable, especially for client billing, which required hour-by-hour accuracy.

Why Metaviz Chose WebWork

After testing multiple platforms and growing increasingly frustrated with syncing issues and high costs, Zain came across WebWork.

• Reliable tracking across devices and time zones

Unlike other tools that failed to align data across platforms, WebWork delivered accurate, real-time tracking across both Windows and Mac systems. Time logs on the desktop apps matched exactly with the dashboard, and time zone differences were handled seamlessly. For a company working on multiple global projects, this consistency was essential.

"When we were using Hubstaff, it would show different tracked hours on the app and dashboard, which created confusion.
With WebWork, everything synced properly from the start."

– Zain Ali, Full Stack Engineer at Metaviz

• Cost-effective without compromise

Initially, Zain discovered WebWork through a lifetime deal on AppSumo, which made it a risk-free opportunity to test. The team was impressed by its functionality and later moved to the Starter Plan for ongoing use.

Compared to Hubstaff and similar platforms, WebWork offered all the core features Metaviz needed at a fraction of the cost, eliminating the need to pay for multiple tools.

- **Intuitive and easy to onboard**

Zain and the team found WebWork intuitive and started tracking time right away.

"It was easy for everyone to get started. I already understood what to expect from the tool, and everything worked as expected."

– Zain Ali, Full Stack Engineer at Metaviz

- **No more guesswork**

WebWork's activity tracking, screenshots, and reporting features gave Zain and his team the exact visibility they were missing. With a single platform, they could monitor real-time performance, export detailed reports, and make informed decisions about employee productivity and project billing.

How WebWork Transformed the Team's Workflow at Metaviz

With WebWork in place, Metaviz Pro finally gained the visibility and structure it needed to manage a growing team without adding new layers of manual oversight or admin work.

- **Real-time visibility into productivity**

"The most valuable features for us are the activity tracking and screenshots. We can instantly see how active an employee was and what they were working on—without interrupting their flow."

– Zain Ali, Full Stack Engineer at Metaviz

The combination of highly detailed activity tracking and screenshot monitoring gives the management of Metaviz a clear picture of how employees spend their time. Instead of relying on assumptions or self-reported logs, the team now has real-time data at their fingertips.

- **Faster and more accurate client billing**

"We saved time on project billing. Instead of calculating everything manually, we just export reports from WebWork and send them to clients."

– Zain Ali, Full Stack Engineer at Metaviz

Zain says WebWork's automated time tracking and reporting eliminated the need for manual logs, especially for client projects billed by the hour. Now the team can export detailed reports showing exactly how many hours were spent on each project and by whom which saves time and, most importantly, ensures accurate billing.

- Efficient monthly reporting and KPI tracking

Each month, managers at Metaviz use WebWork's reports to calculate performance metrics and assess employee KPIs. The data is clean, consistent, and aligned with actual output, giving team leads enough confidence to make decisions based on evidence, not guesswork.

Results & Measurable Impact with WebWork

Since adopting WebWork, Metaviz Pro has seen tangible improvements in how they manage time, productivity, and performance.

- **Up to 25% increase in employee productivity**

With real-time activity tracking and screenshots, employees became more accountable for how they spent their time. This visibility led to a measurable productivity boost of up to 25%, as managers could now easily identify inefficiencies or distractions and address them proactively.

"We saw a significant boost in productivity after switching to WebWork. People knew their time was being tracked accurately, and that encouraged better focus."

– Zain Ali, Full Stack Engineer at Metaviz

- **20–30% time savings on admin and client billing**

WebWork replaced manual processes that previously slowed the team down. Tasks like generating invoices and calculating hours tracked for clients were once done manually. Now, detailed reports are exported directly from the platform, resulting in an estimated 20–30% time reduction in administrative work, especially for monthly reporting and client billing.

- **\$1,200–\$2,400 saved annually**

By switching from Hubstaff and avoiding the need for separate reporting or monitoring tools, Metaviz reduced its tool spend by an estimated 15–20%. Zain reports that WebWork saves the company approximately \$100–\$200 per month, amounting to \$1,200–\$2,400 annually—not including the indirect savings gained from operational efficiency.

- **Clear, data-backed performance reviews**

Managers now rely on WebWork's reports to evaluate team performance and track KPIs. The tool provides consistent data that eliminates disputes and enables informed decisions about workload, bonuses, and role responsibilities.

"Internally, WebWork really helped us scale. We didn't need more people to monitor productivity. Just better tools to track it."

– Zain Ali, Full Stack Engineer at Metaviz

MID Construction: 50% Cost Savings and Full Visibility

CONSTRUCTION GROUP

Location	Los Angeles, California
Industry	Construction
Projects	1,500+ completed builds
Workforce	50–100 on-site and off-shore employees

"With WebWork we finally have one clear view: every offshore teammate's screenshots, their real-time activity score, and timesheets that line up perfectly with each project. What used to be guesswork is now hard data and we're paying nearly half what we spent before."

– Marry Mapula, Back Office Manager at MID Construction

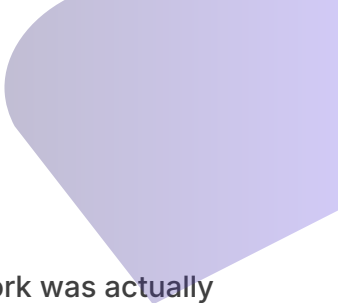

By moving its entire offshore workforce from Hubstaff and Jibble to WebWork Time Tracker, MID Construction saved ~ 50% per remote employee while acquiring additional tools that are built into WebWork. They no longer struggle with "glitchy time trackers" and have completely moved away from Hubstaff and manual WhatsApp check-ins while getting utter transparency into every employee's work process.

The Problems MID Construction Faced with Hubstaff and Jibble

Before WebWork, MID Construction relied on a patchwork of tools that never quite fit together. First, the team was used to logging time through WhatsApp. Then they experienced the cons of Jibble and Hubstaff, the main ones being limitations and bugs in both tools.

- **Glitches & false logs in Hubstaff**

Timers stayed active even when on-site staff were off duty, inflating hours and forcing managers to verify time manually.

- **No screenshots or tasks in Jibble**

Remote engineers could clock in, but supervisors had zero visibility into what work was actually done because of the lack of screenshots and direct visibility stemming from it.

- **Manual WhatsApp check-ins**

Field superintendents messaged timestamps to prove location, creating a second, error-prone data trail.

- **Extra cost of using a separate task app**

While Hubstaff offers a separate app for task management, the team would have to pay for two separate platforms.

How WebWork Solved the Tracking and Transparency Issues

Spending time and resources on tools that didn’t provide the necessary results made the team at MID Construction search for a solution that would prove efficient and not cost a fortune.

That’s when they came across WebWork. It not only filled the gap and solved the issues they were experiencing with other trackers, but also cost around 50% less than Hubstaff.

WebWork Fixes	What It Delivers
Real-time activity verification	Live activity percentages and automatic screenshots confirm every tracked minute.
Task- & project-based timers	Members select the exact project and task when they clock in, so labour hours flow straight into the right cost code.
One-click proof for payroll	Exportable timesheets and screenshots provide proof of work and simplify payroll.
50% lower cost for remote seats	At \$7.99 per user, WebWork Plus halves the spend compared with Hubstaff’s GPS bundle at ~\$16 per user.
One tool for tasks & time	Plan work and track time in the same app—eliminating the need for separate task-management tools.

Early Wins After Only Two Months of Using WebWork

MID Construction noticed improvement as promptly as after two months of using WebWork. Managers no longer had to make guesses or struggle with buggy time tracking.

With WebWork they now get:

- **Full visibility for remote teams**

Every off-shore hour now has an attached screenshot and activity score. Managers can now see how their off-shore team is performing in any corner of the world.

- **Clean timesheets**

Payroll export time dropped from half a day to under one hour. While previously some employees struggled with filling out timesheets manually or incorrectly because of faulty time tracking, with WebWork they no longer have to worry about errors.

- **Budget relief with added value**

By transitioning from Jibble and Hubstaff, MID Construction saves around 50% on time tracking while also getting additional tools built into WebWork.

- **Project costing insight**

Managers can already see labour totals per project, which helps them make accurate estimations.

"With WebWork I no longer need to chase spreadsheets. The tracker tells me everything I need such as exactly how many hours each project is burning and how productive each team member is—game-changing for our budget and schedules."

– Marry Mapula, Back Office Manager at MID Construction

How IGENIEUX Streamline Hiring and Payroll with WebWork

Location	Cebu & Siargao, Philippines
Industry	Outsourcing & Offshoring Consulting
Work mode	On site and remote
Team Size	0–50 employees (remote and on-site)
Main Clients	US & UK-based companies

“With WebWork, I can onboard a whole batch of new hires in minutes, monitor productivity across teams, and generate timesheets that align perfectly with payroll. It’s simple, reliable, and makes my job as an HR so much easier.”

– Karen Mae Beniabon, HR Officer at IGENIEUX

By replacing multiple tools with WebWork Time Tracker, IGENIEUX—a fast scaling outsourcing consultancy—transformed their recruitment and payroll operations. With full visibility into employee productivity and attendance, WebWork helps the company ensure accurate payroll, faster onboarding, and real-time performance tracking, all while managing both on-site and remote teams with ease.

The Problems IGENIEUX Faced Before WebWork H2

“With WebWork, I can onboard a whole batch of new hires in minutes, monitor productivity across teams, and generate timesheets that align perfectly with payroll. It’s simple, reliable, and makes my job as an HR so much easier.”

– Karen Mae Beniabon, HR Officer at IGENIEUX

Before adopting WebWork, IGENIEUX struggled with fragmented processes across time tracking, payroll, and productivity management. As the company began to scale both its remote and on-site teams, their existing tools, and manual processes fell short, causing delays, inaccuracies, and frustration across departments.

- **Payroll inaccuracies and compliance challenges**

With the complexity of Philippine labor laws and government-mandated deductions, accurate payroll was a critical need. But without a reliable time tracker, the team at IGENIEUX were forced to manually verify work hours. This would often mean relying on screenshots or employee claims, leading to potential errors and inconsistent records.

- **Complications with Toggl and Hubstaff**

IGENIEUX initially tried Toggl and Hubstaff, but both tools proved problematic. Toggl lacked the necessary payroll integrations and screenshots, while Hubstaff, although functional, was too complex and error-prone for everyday use. The team often found themselves dealing with bugs, overly technical dashboards, or unclear data exports.

- **Manual attendance tracking**

In locations like Siargao, where biometric devices weren't available, tracking attendance became a logistical issue. Managers couldn't easily confirm punctuality or productivity, and employees lacked a transparent system to validate their working hours.

- **No visibility into productivity**

With no way to measure how employees spent their time once clocked in, there was no safeguard against passive time or misuse of work hours. Managers had no clear view of employee output but only clock-in and clock-out times from other platforms.

How WebWork Solved the Tracking and Visibility Issues H2

After struggling with faulty and inaccurate yet pricey time trackers like Toggl and Hubstaff, INAGENIUX needed a tool that would track work hours accurately, provide proof of work, and not cost a fortune.

WebWork not only replaced multiple tools but also connected time tracking with productivity, attendance, and payroll. It allowed HR to gain clarity, managers to make faster decisions, and employees to clearly understand expectations.

The HR team now spends less time verifying work logs and more time focusing on strategy. Onboarding is faster, payroll is more accurate, and both remote and on-site teams are held to the same transparent standards.

"WebWork gives us everything we need in one platform—onboarding, time tracking, activity monitoring, and reporting. It's efficient and easy to use, both for us and our employees."

– Karen Mae Beniabon, HR Officer at IGENIEUX

WebWork Fixes	What It Delivers
Accurate and compliant payroll	Timesheets tied to activity levels, break logs, and attendance history.
Reliable attendance tracking	Real-time monitoring and clock-ins—even without physical biometric systems.
True visibility into productivity	Automatic screenshots and activity scores show real-time performance.
Smooth onboarding for new hires	User-friendly interface enables quick training and adoption.
Clear proof of work for every shift	Logs and screenshots eliminate disputes and increase accountability.
All-in-one platform for HR workflows	Combines task tracking, productivity monitoring, and payroll in one place

With WebWork in place, IGENIEUX has built a foundation of clarity and consistency across its workforce, whether employees are at home, at the office, or logging in from anywhere in between.

Wins and Measurable Results with WebWork H2

Within weeks of adopting WebWork, “IGENIEUX began seeing real improvements across key areas of its operations”, states Karen. From HR to payroll, the team gained access to consistent, easy-to-understand data that removed the guesswork from managing people and performance.

“With WebWork, I can onboard a whole batch of new hires in minutes, monitor productivity across teams, and generate timesheets that align perfectly with payroll. It’s simple, reliable, and makes my job as an HR so much easier.”

– Karen Mae Beniabon, HR Officer at IGENIEUX

Before WebWork she had to do manual checks while dealing with inconsistent reports and employee disputes. Now she gets weekly activity level (EAL) reports, cleaner timesheets, and alignment between hours worked and project expectations.

WebWork has created a culture of accountability that the team was missing.

“I can onboard a batch of new hires and have them up and running in minutes. WebWork makes it easy to manage more people without increasing the workload.”

– Karen Mae Beniabon, HR Officer at IGENIEUX
