

EXTERNAL ATTACK SURFACE MANAGEMENT

Integrate advanced technology to protect your business from external vulnerabilities with RiskProfiler's AI-powered External Attack Surface Management system, enabling proactive threat detection and effective external risk management.

External Attack Surface Management

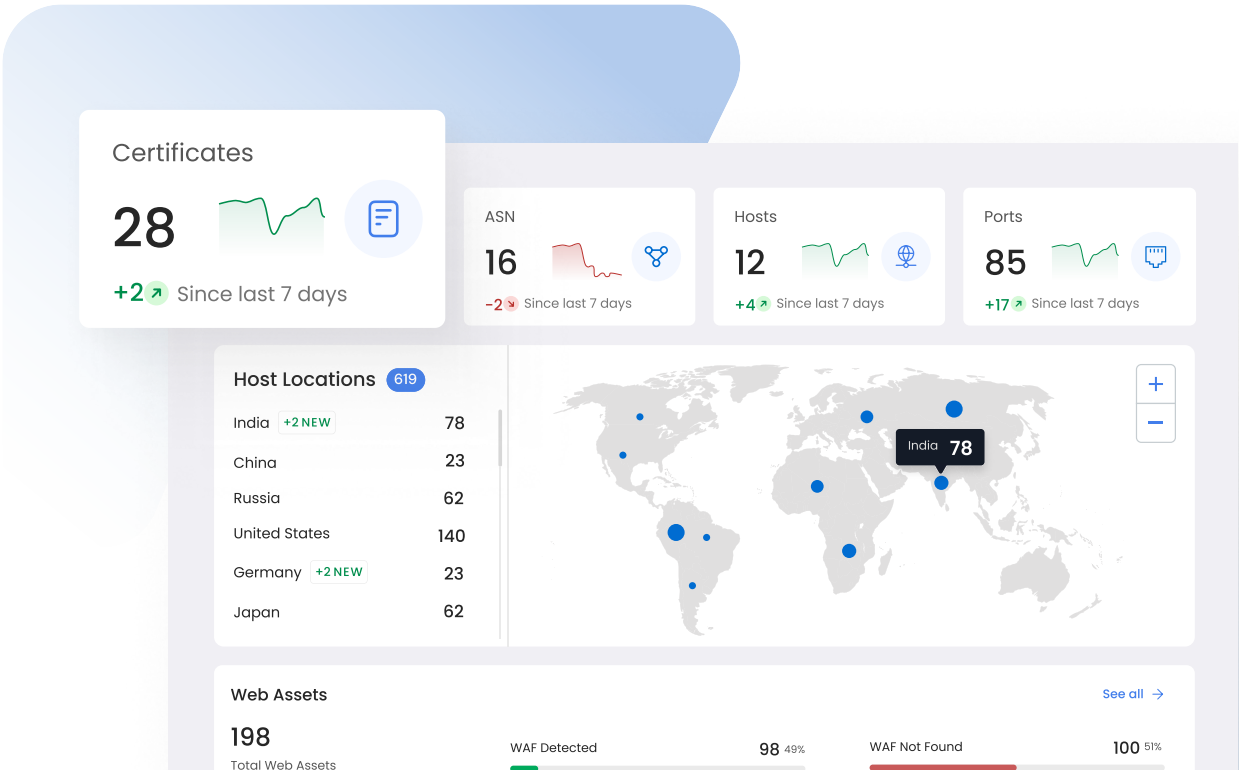

Automated Reconnaissance For Uncovering Digital Shadow Risks

Why Choose RiskProfiler?

- 
Holistic AI-Powered Asset Inventory
 Utilize RiskProfiler’s Internet Inventory to gain a comprehensive overview of your digital footprint. Manage and monitor all external-facing assets, including domains, IP addresses, and DNS records, in a unified dashboard, ensuring no vulnerabilities go unnoticed.
- 
Advanced Attack Lifecycle Mapping
 Leverage RiskProfiler’s advanced Attack Path Analysis to visualize potential attack vectors across your external surface. Gain actionable insights into the attack lifecycle with probability scores and strategic visualizations, enabling you to identify and address high-risk vulnerabilities proactively.
- 
OSINT Graph for Enhanced Visibility
 RiskProfiler’s Advanced OSINT Graph proactively identify vulnerabilities and misconfigurations across external assets. Pinpoint critical exposures such as leaked credentials, unprotected endpoints, or sensitive data with AI scanning.

BENIFITS AT A GLANCE

- 
Simplified Integrations
 Seamlessly integrate RiskProfiler’s EASM solution with your cloud platforms and ticketing systems to enhance workflow efficiency.
- 
Streamlined Workflows
 Automate asset discovery, vulnerability detection, and reporting to save time and resources for your security team.
- 
Comprehensive Monitoring
 Ensure proactive threat identification and enhanced decision-making with continuous, in-depth monitoring.
- 
Simplified Risk Mitigation
 Automate the threat remediation based on CVSS score and take down risks before escalation

KEY FEATURES

Discover Unknown Digital Assets

Automatically map your external digital footprint, including cloud assets, web applications, shadow IT, and exposed endpoints to eliminate blind spots.

Vulnerability Detection and Prioritization

Detect misconfigurations, outdated software, and exploitable vulnerabilities and prioritize risks based on their business impact and threat profile

Identify and Secure Open Ports

RiskProfiler advanced algorithm continuously scan for exposed ports and misconfigured services in vendor system to prevent unauthorized access and potential breaches.

Mitigate Supply Chain Vulnerabilities

Identify and address risks within your extended supply chain by assessing third-party and fourth-party vendors for security gaps and potential exposures.

Monitor Data Exposures and Breaches

Continuous monitoring of your attack surface for new exposures and vulnerabilities with advanced CVE, CVSS, and EPSS scoring to stay ahead of emerging risks

Identify Risk Attributes

Integrate powerful risk attribution techniques for exploitation prediction scoring system helps you assess risk severity, exposure categories, and other risk attributes

Fortified External Attack Surface for Stronger Protection

RiskProfiler integrates advanced AI-ML technologies into EASM solutions that assess and report your business-specific security including your website hosts, common vulnerabilities, attack surfaces, and asset attributes. Whether mitigating threat escalation or fortifying attack surfaces, RiskProfiler's EASM solution provides a comprehensive protection plan.

“

RiskProfiler extends its protective shield well beyond organizational limits. The visibility it offers is a rare commodity in today's cybersecurity landscape”

— Shantanoo Govilkar, Vice President, DivIHN
