> " My advice to leaders: don't patch together a stack. Build a secure, cloud-native foundation from day one with platforms that integrate, scale, and reduce your overhead. JumpCloud helps you build that strong foundation, setting up IT in one or two days instead of months.

70%
Faster Onboarding

100%
Audit Ready Everytime

60%
Drop in Manual IT Effort for Access Control

Challenge

Manual onboarding and password resets stifled productivity for a rapidly scaling team of employees and consultants.

Traditional tools like Active Directory couldn't manage their Mac-heavy fleet or meet the agility required without hiring additional staff.

Solution

Integrated JumpCloud with Google Workspace to create a seamless, cloud-native identity and device management stack.

JumpCloud established data residency in KSA, ensuring Tamara met stringent SAMA and UAEIA data protection requirements.

Impact

Achieved 100% encryption compliance and audit-readiness, maintaining zero critical security incidents since 2022.

Self-service workflows eliminated 100% of help desk tickets for password resets, allowing a lean IT team to support exponential growth.
