jumpcloud™ | **Heyjobs**

Berlin-based AI talent platform HeyJobs needed to escape a fragmented, expensive IT stack. They executed a lightning-fast migration, moving the entire organization from Okta to JumpCloud in less than a week without disrupting a single user.

<1 week
Migration From Okta With Zero Downtime

40%
Faster Deployment With Apple DEP

30%
Faster Onboarding

Challenge

Operations were slowed by multiple tools including Okta for identity and 1Password for credentials, leading to high costs and severe vendor lock-in.

The lack of integrated mobile device management meant constant manual troubleshooting of SCIM integrations and no visibility into device compliance.

Solution

The IT team executed a full Identity Provider (IDP) migration from Okta to JumpCloud in just 5 days—completed before most employees even noticed.

Replaced 1Password licenses with JumpCloud's password manager, significantly cutting overall licensing costs.

Impact

The team can now enforce policies, deploy patches, and provide remote support from one console—eliminating hours of manual work each week.

Unified control & remote provisioning allow the team to deploy emergency replacements in minutes and support secondary offices without on-site IT staff.
