

Why Paramify?

Outcomes

001

Security

Spend time on what matters - security improvements over compliance paperwork. Security is the goal, compliance is the outcome

002

Consistency

Automation to produce and maintain accurate, clear, up-to-date ATO packages across multiple systems and multiple frameworks

003

Efficiency

Cut documentation timelines, workloads, and headache by 90%+. Complete ATO packages, including SSP and appendices, in a fraction of the time with a fraction of the resources. .

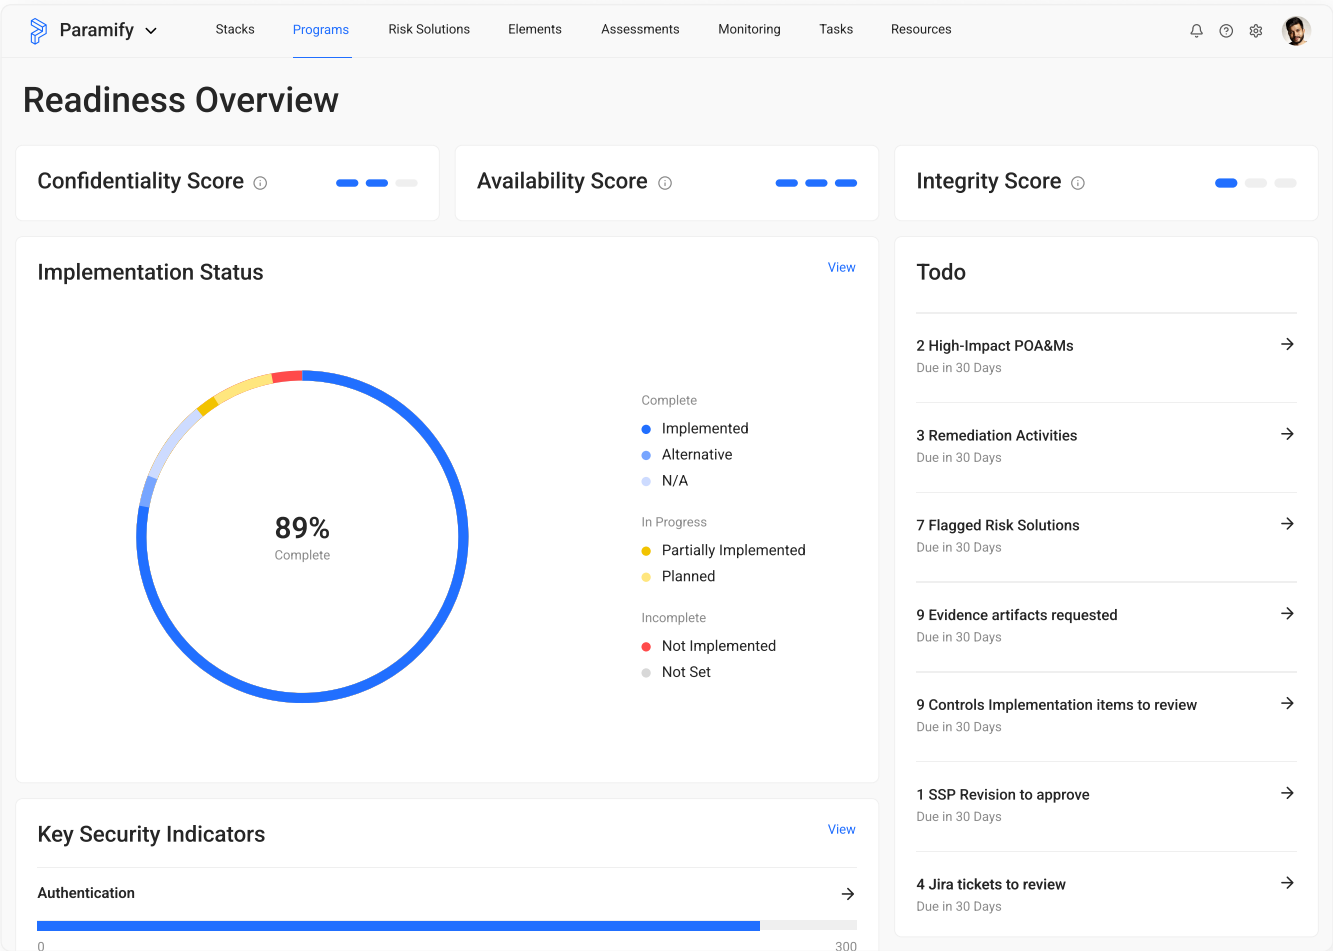

WHAT CLIENTS ARE SAYING

“With Paramify we’re taking 2 weeks to do what used to take 4 months.”

- Jason Ford, CEO Steel Patriot Partners

Continuous ATO - Implementation, assurance, and reporting for NIST 800-53 FedRAMP & FISMA ATO packages.

What We Do

Move faster, meet deadlines, and never open a word doc, spreadsheet or scan file again.

Gap Assessment

Living Gap Assessment

Living gap assessment becomes your compliance roadmap

Stagnant, expensive gap assessment

Documentation

Automate Documentation

Generate automated documentation in 1-7 days

6-24+ months to manually write documentation

Accurate Documentation

40% faster time to authorization with accurate documentation

Human errors require rounds of corrections & invite auditor scrutiny

OSCAL-based Documentation

Streamlined audits with OSCAL-based digital compliance documentation

Slow, manual audits with too little time to review hundreds of pages

Continuous Monitoring

Automate POA&M Documentation

Accurate POA&Ms in half the time w/o the headache. Don't miss deadlines with easy to manage to-do items.

Integrated Evidence Management

Save time with a unified evidence system that minimizes or eliminates duplicate collection efforts.

Vuln Management w/ Duplicate Detection

Never open scan files or spreadsheets. Automatically close resolved vulnerabilities. Use duplicate detection to accurately create issues.

POA&M Open API/Jira integration

ConMon and issue management tools integrate seamlessly with your POA&M documentation so you can efficiently collaborate with your DevOps and Security teams to remediate issues on time.

Spending 40-60 hours a month documenting POA&Ms.

Sorting through disconnected evidence and documentation wastes time.

Reviewing many dozens of scans and hundreds of vulnerabilities. Constantly asking, "Is this a new or duplicate POA&M?".

Disconnected issue management and ConMon tools force manual tracking, causing overdue POA&Ms and frustrated teams.

Coming Soon

Continuous ATO

Always audit ready with live control monitoring and evidence repository.

Auto Apply Risk Adjustment

Automatically apply risk adjustments to multiple POA&Ms for faster, more accurate management.

Automated Inventory Reconciliation

Generate your inventory workbook quickly without looking at scan files.

Automatic POA&M Asset Tracking

Quickly and accurately update affected assets to new or existing POA&Ms without opening a spreadsheet or scan file.

Documentation that is immediately outdated

Manually calculating and applying Risk Adjustment adjustments is time-consuming.

Generating the inventory workbook each month is a tedious and unreliable process.

Adding and removing assets from POA&M items is repetitive and error-prone.
