

LEGION  **Island**

**DEPLOY A HIGH-TRUST
SOC AUTOMATION PLATFORM**

Joint Solution Overview

LEGION

What is **Legion** (The AI SOC Companion)

Legion is the first AI SOC companion that lives in the browser and scales your best analysts' workflows into automated, trustworthy, and explainable agentic workflows. It learns directly from how your SOC works—observing real analyst actions, adapting to your environment, and gradually automating repetitive investigation and response tasks while keeping analysts fully in control.

Key characteristics:

- **Lives where your analysts work** — the browser
- **Learns from inside your workflows**, accurate by design
- **Analysts stay in control** with explainable, supervised, and autonomous modes
- **Zero-integration deployment**, no APIs, no complex setup

The outcome: Faster response, every alert investigated, more coverage without headcount, and analysts freed from repetitive work.

✓ Deploy instantly

✓ Zero integrations

✓ No APIs, no setup

✓ Analysts love it

What is **Island** (The Enterprise Browser)

Island is the **Enterprise Browser**—a secure, Chromium-based browser that gives organizations **complete control, visibility, and governance over the last mile** where users, applications, and data interact.

Using the smooth browsing experience employees expect, Island embeds **access and security policies directly within the browser**, eliminating the complexity of external agents and allowing work to flow freely while remaining fundamentally secure.

Island delivers:

- **Complete control, visibility, and governance over the last mile**
- **Embedded access & security policies directly in the browser**
- **Native protection for sensitive applications, SaaS, and web access**
- **Built-in data protection without cumbersome MDM or endpoint agents**
- **Unmatched visibility and last-mile protection** for BYOD, contractors, privileged access, and critical SaaS apps

✓ Complete control

✓ Native protection

✓ No MDM or agents

✓ Unmatched visibility

This makes Island the ideal foundation for securing modern, browser-driven workflows.

LEGION

The Joint Solution: Legion Deployed and Governed Through Island

Island and Legion combine to create a high-trust SOC automation platform with enterprise-grade control and visibility:

1. Seamless, Centralized Deployment of Legion

Island enables organizations to **force-install, manage, and govern** the Legion extension across all relevant employees:

- Automatic installation of Legion with no user action
- Cannot be removed or modified by end users
- Eliminates deployment fragmentation across analysts and endpoints

2. Enterprise-Grade Security & Governance for Legion

With Island's embedded access and security policies, organizations can control:

- What Legion can access and where it can operate
- Daily scanning, risk scoring, and version oversight
- Full visibility into extension activity and browser-level events

Island ensures Legion always operates within a tightly governed, auditable environment.

3. A Unified, High-Visibility SOC Environment

Island provides detailed telemetry and last-mile visibility, while Legion provides explainable, AI-driven workflow execution:

Together they offer:

- Closed-loop visibility of analyst actions + AI automation
- Protection and monitoring of sensitive SOC tools and consoles
- Enterprise-grade logging for compliance and audit

4. Zero-Friction SOC Automation at Scale

Legion requires no integrations and works entirely in the browser. Island ensures that environment is **secure, consistent, and centrally managed**.

SOC teams get immediate access to automation without deployment complexity.

Benefits of the Combined Solution

For Security Leaders

- Enterprise control over SOC automation
- Strong governance, audibility, and compliance
- Unified policies for both human and AI-driven workflows

For SOC & IR Teams

- Legion pre-installed and always available
- AI workflows executed securely in a controlled browser
- Consistent environment for investigations and response

For IT & Platform Teams

- No agents, no re-platforming, no deployment sprawl
- All management performed from Island's console
- Daily scanning ensures extension safety and integrity

LEGION

Next Steps

We would love to show you how easy it is to onboard and see the value of Legion.
