

Microsoft 365 Backup Storage

For rapid, large-scale recovery

Enterprise-grade Microsoft 365 recovery at speed

Downtime isn't just disruptive—it's a risk to revenue, compliance, and reputation. When your business suffers a large-scale data loss event, like ransomware, time is of the essence.

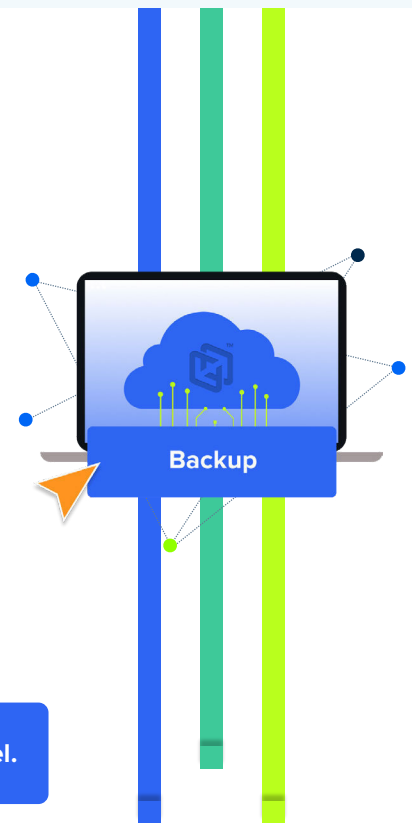

CrashPlan now offers seamless integration with **Microsoft 365 Backup Storage**, which enables administrators and users to rapidly restore large amounts of Microsoft 365 data at high speed, while maintaining control through a single, unified platform.

Comprehensive resilience for Microsoft 365 data

Microsoft 365 Backup Storage enables high-performance, full-asset restores across **Exchange Online**, **OneDrive**, and **SharePoint**— optimized for use cases where rapid recovery of entire workloads is required.

This premium data recovery option can be leveraged on its own or as part of a comprehensive data protection strategy along with CrashPlan for Microsoft 365. Within CrashPlan's data resiliency platform you can orchestrate:

- **Rapid, large-scale restores** via Microsoft 365 Backup Storage
- **Granular restores and search** via CrashPlan for Microsoft 365

Together, these functions support a layered, risk-aware data protection model.

Why Enterprises Choose CrashPlan + Microsoft 365 Backup Storage

Accelerate Recovery at Scale

Restore full Microsoft 365 assets for selected users at up to 2TB per hour—reducing time to recover from ransomware or any data loss event.

Enterprise Security & Governance

Compliance is baked in, with integrated support for SSO, role-based access control, encryption in transit and at rest, and policy-based user management.

One Console, Full Coverage

No need for disparate tools; you can manage everyday data protection and disaster recovery through the CrashPlan console your team already uses.

Microsoft-Trusted Recovery Infrastructure

Built directly on Microsoft's native backup storage architecture, this integration leverages infrastructure trusted by the world's largest organizations to ensure enterprise-grade performance.

Strengthen Your Microsoft 365 Data Protection Strategy

Ensure your workforce is protected from data incidents of any magnitude. Pairing CrashPlan with Microsoft 365 Backup Storage allows enterprises to meet stringent RPO and RTO requirements, without managing disjointed systems or adding operational burden.

The Bottom Line

CrashPlan provides cyber resilience and data protection through a unified platform trusted by organizations worldwide. With secure, scalable backup and recovery for servers, endpoints, and SaaS applications, CrashPlan safeguards critical data against threats such as accidental deletion, ransomware, and system failure. Built with proactive threat detection and automated governance, CrashPlan ensures continuous access, compliance, and peace of mind—without disrupting your business.
