Right-Hand
CYBERSECURITY

Phishing Simulations and Triage

PRODUCT OVERVIEW

Condition users to recognize phishing emails and reduce your organization's exposure by automating triage and response.

End-to-end phishing defense improves employee vigilance and helps security teams remediate faster with less manual effort.

BENEFITS

- **AI-Powered Templates:** Leverage AI to generate phishing emails that mirror the messages employees receive every day.

- **Automated Triage:** Run automated triage on key phishing email elements and act on suspected threats with a click.

- **Real-World TTPs:** Use our content library based on real-world tactics—or customize it to fit your environment.

- **Remedial Training:** Convert failed simulations into instant learning, auto-delivered to employees' screens.

- **In-Depth Analytics:** Get detailed phishing simulation reports for users, departments, and the full organization.

- **1-Click Reporting:** Make it easy for employees to report suspicious emails—boosting participation.

PRODUCT FEATURES

Phishing Simulations

Condition employees to identify phishing attacks with real-world automated and customized phishing simulations.

Phishing Report Button

Integrate with O365 and Google Workspace to empower users to report malicious or suspicious phishing emails.

Phishing Triage

Auto quarantine suspicious or malicious emails at scale across your enterprise to reduce manual admin burden.

HOW IT WORKS

Simulate

Deploy AI-generated templates to assess employee readiness.

Train

Target high-risk users with teachable moments within the browser.
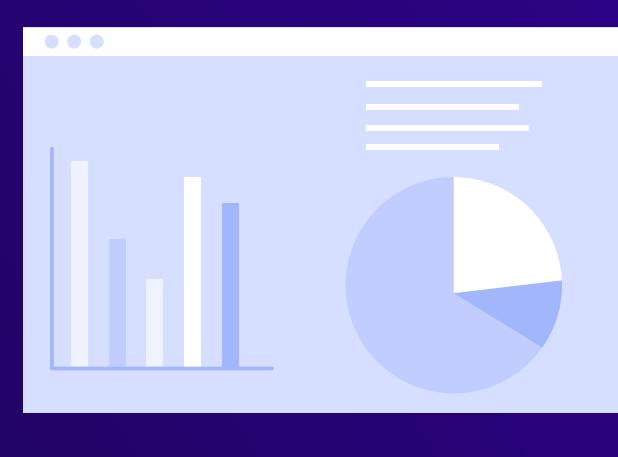

Report

Empower employees to flag suspicious emails with one-click reporting.
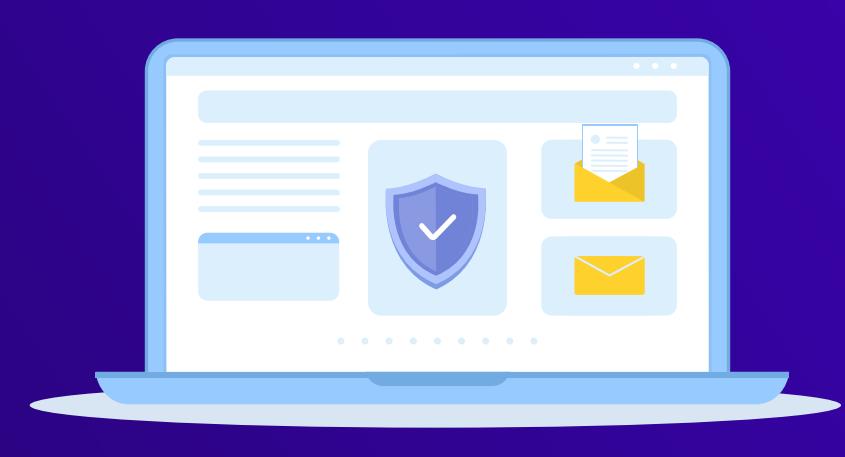

Triage

Investigate, quarantine, and remove threats across inboxes—automatically.

CUSTOMER REFERENCE

"PhishArm's URL analysis engine helps us quickly identify if a reported email is malicious or not."
