VONAGE

Optimize Customer Journeys with Our Full-Service 2FA API

Customer Onboarding
Make sure new accounts are created by real human beings by deploying 2FA during the sign-up process.

Important Transactions
Ensure large or important financial transactions are verified in real-time by the end-users.

Password Resets and Passwordless Login
Validate that password resets are authentic and even replace traditional username/password schemes using 2FA.

Protect Your Users and Your Business with an All-in-One, Scalable Verification Solution

Validating genuine customers just got easier. Our patented two-factor authentication (2FA) technology helps you protect against fraud, build trust, and increase customer acquisition across multiple channels— no telecom or security experience required. Plus, you'll only pay for successful verifications.

Verify Any User, Anywhere.

Mobile and Landline Verification
Allow both landlines and mobile phone numbers or limit network types for increased flexibility.

Custom Templates
Customize message templates, pre-record voice calls, and configure the time between retries.

Bring-Your-Own-PIN
For security- and privacy-conscious businesses, Verify now allows customers to generate and manage their own PIN code (per-request model only).

Custom Failover Sequence
Verify now offers more flexibility and control by allowing customers to define what communication channels to use (per-request model only).

High Availability
Verify is hosted using Vonage's global cloud infrastructure, which results in a faster, more reliable product experience.

More Channels
Vonage continues to add more communication channels for Verify including WhatsApp, Facebook Messenger, and more.

Global Reach
Increase your addressable market with the ability to verify and acquire customers anywhere in the world.

Global Compliance
Ensure PIN codes are delivered over SMS and text to speech (TTS) in accordance with country requirements.

Geo-Customization
Tailor messaging language and sender ID to specific locales for a more personalized user experience.
