

# Build and Maintain Trust at Scale

threatER is the leading preemptive cybersecurity platform designed to help organizations identify and enforce trusted activity across their entire environment. Instead of just detecting threats after the fact, threatER takes proactive action by reducing the problem space and using real-time insights to continuously improve your security posture.

"threatER enables trust at scale by learning from your data, reducing risk, and helping your existing security tools work smarter."

## KEY BENEFITS

### Preemptive, Not Reactive

Enforces on verified, trustworthy activity and removes untrusted traffic before it clogs your stack. threatER helps prevent threats from disrupting operations.

### Gain Insights from a Reduced Problem Space

By filtering out known untrusted traffic, less data flows into your security stack—resulting in fewer alerts, more clarity, and better decisions.

### Automated, Adaptive Security at Scale

With seamless SaaS deployment, threatER scales across cloud, on-prem, Wi-Fi, and remote environments without slowing down business performance.

## HOW IT WORKS

### Reduce Your Problem Space

Use micro-segmentation to allow trusted connections, deny untrusted ones, and pass the rest to your existing security controls.

"Less noise, more signal."

### Gain Better Insights

With fewer false positives and cleaner traffic, your tools surface higher-quality insights—making it easier to identify risk and take targeted action.

### Feed Insights Back In

threatER uses your own security stack's intelligence to continuously refine what trusted traffic looks like. The result? Smarter protection that keeps getting better.

## WHY ORGANIZATIONS CHOOSE THREATER

- **Improves Efficiency:** Let your tools focus on what matters.
- **Reduces Risk:** Catch and eliminate untrusted activity earlier.
- **Simplifies Security:** Easy to deploy, easy to manage, and no performance tradeoffs.

## USE CASES

- Secure hybrid and remote work environments.
- Protect legal, healthcare, finance, retail and education networks.
- Extend trust enforcement to Wi-Fi, cloud, and edge locations.

## GET STARTED

Learn how you can preemptively secure your environment and turn your stack into a smart, adaptive security engine.
