

MDaemon 25.5 - New Feature Highlights

The following information provides a quick overview of new features end users and IT administrators will find useful. A more comprehensive list of fixes and new features can be viewed in the MDaemon Release Notes.

Note: MDaemon 25.5 requires Windows 10, Server 2012, or newer.

MDaemon Email Server & MDaemon Private Cloud have been combined into a single installer. Moving forward, cloud-specific features will be enabled based on the license key. Therefore, businesses will no longer need to download a separate installer file to install MDaemon Private Cloud.

New Features for MDaemon 25.5

“Send As” Permissions

A new "Send As Permissions" screen has been added at *Security | Security Manager | Sender Authentication* that lets you configure additional email addresses that accounts are allowed to send mail as. This allows MDaemon Webmail users to use an account's "Send As" addresses as possible From addresses when composing an email.

New Web Conferencing Server

MDaemon now includes a web conferencing server which can be connected to through MDaemon Webmail when using the Pro theme. This allows users to conduct one-on-one or group web conferencing meetings, including audio, camera, and screen sharing.

Other Improvements

MDaemon

- The \MDaemon\PEM\ folder is now included in the configuration file backup system.
- VBR (Vouch by Reference) has been deprecated and removed.
- A new SSL/TLS option has been added that will automatically detect and activate newer SSL/TLS certificates.
- The minimum length of strong passwords can now be set higher than 15 if nonreversible password encryption is enabled.

Remote Administration

- Added the ability to apply permissions to sub-folders for user shared folders at *Account Manager | Edit | Shared Folders | Edit Access Control*.

MDaemon Webmail

- Added schedule publishing options to require or hide the phone, address, and notes fields on the appointment scheduling view.

For a complete list of new features and updates, please see the [MDaemon release notes](#).
