# Appsheet Development Services by Steegle

powered by **AppSheet**
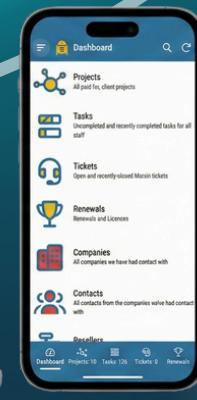

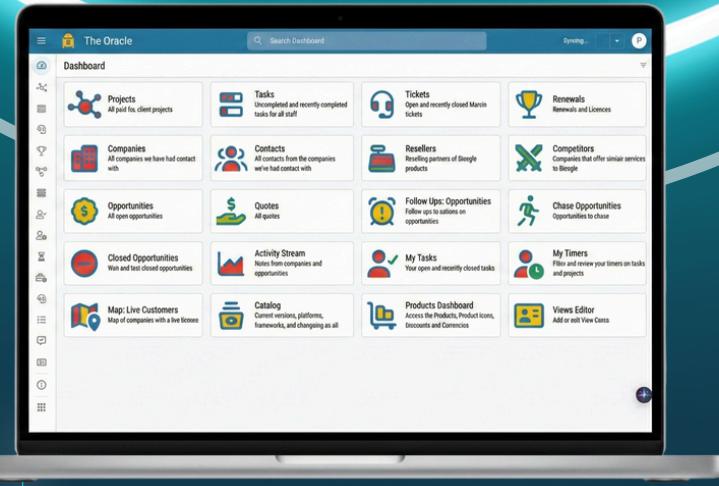

Stop Renting Your Operations.
Start Owning Them with Enterprise AppSheet Backed by Google Technology

AppSheet is Google's application platform within Google Workspace — and Steegle designs, migrates, and delivers enterprise-grade operational systems on top of it.

Architecture. Automation. Migration.

Your operations are fragmented across CRMs, forms, approvals, and legacy tools

Enterprise Scalable AppSheet, Done Properly.

AppSheet is just the front end — we power the logic, automation, and data flow with Google Apps Script

Most teams jump between tools without aligning them. We help you consolidate your operations into one secure, governed AppSheet platform—inside Google Workspace

Cut Licence Waste

Per-seat pricing means growth increases software costs. AppSheet runs inside Google Workspace — no licence creep as teams scale.

Retire Redundant SaaS

Replace CRM, approvals, trackers, & internal tools or MS Power Apps with one governed system. Fewer vendors. Fewer renewals. Fewer invoices.

Own Your Systems & Data

Your workflows, your data model, your security policies. No vendor lock-in. No forced upgrades. No roadmap risk.

Automate What Costs You Time

Automate approvals, documents, reporting, and Drive structure. Reduce manual effort that quietly inflates operating cost.

Migration & Scale Without Licence Drag

Moving to Google Workspace?
Don't carry expensive legacy apps with you.

💰 PROVEN COST REDUCTION

Education Communications Platform
PUBLIC SECTOR

We replaced a specialist SaaS application used by parents to communicate with school districts with a bespoke AppSheet-based system built on Google Workspace.

OUTCOME:

- ✅ **~$500,000 saved** over three years in licensing costs
- ✅ One platform supporting 40 schools
- ✅ Structured, workflow-driven communication between parents, teachers and district teams

Powered by AppSheet and enhanced with Apps Script automation, this solution fully leveraged Google Workspace tools — including Google Directory, Drive, and Calendar.

CRM & Operation Consolidation
COMMERCIAL

We replaced Monday.com with a custom Appsheet application, consolidating multiple operational workflows into a single system.

OUTCOME:

- ✅ **~$100,000+ per year** reduction in license spend
- ✅ One application replacing CRM, workflow tracking, and operational tools
- ✅ Functionality beyond what Monday.com could support alone.

By integrating separated systems into one governed application, the organisation removed per-seat cost growth.

🔔 BEYOND "NO-CODE"

AppSheet is described as "no-code". That's true - until scale and complexity matter.

The reality: Forms are easy. Operational systems are not.

The Steegle Standard

We design Appsheet solutions as enterprise systems, not isolated apps:

- ✅ Appsheet for the user experience
- ✅ Governed data models, Scalable design
- ✅ Automation that connects workflows end-to-end

🚀 We Run on What We Build

We don't just implement AppSheet for clients - we run our business on it.

Steegle operate its core operations on a bespoke AppSheet platform, using automation to:

- ✅ Capture and route client leads
- ✅ Automatically create client directories and Drive Structures
- ✅ Apps Script: automation & logic
- ✅ Track delivery, billing and operational workflows end-to-end
- ✅ Built 100% inside your Google Workspace

This allows us to move from enquiry to proposal without manual hand-offs
