

The Unstructured Data Blind Spot

Why Most Analytics Tools Miss 90%
of Enterprise Information

Analysts Are Only
Working With
10%
of Data

The rest 90% stays
locked in documents
your tools can't interpret.

Invoices

Bank Statements

Audit Reports

Contracts

Tools can't analyze what they can't read.

! They carry essential information — but without structure.

Analysts Spend 60% of Their Time

Re-Entering or Cleaning Data.

This isn't insight work.
It's translation forced
by unstructured inputs.

Unstructured Files Break the Workflow Before It Begins

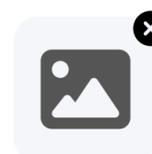

Systems can't read them. Cleanup becomes manual because the inputs arrive without structure.

System files

-  Apex_data.xls
-  Sales_data.xls
-  Omni_data.xls
-  Marketing.xls

File not Supported

Unsupported files are not processed

Basic LLMs and Copilots Don't Scale

They struggle with long PDFs, mixed layouts, and large batches. Accuracy drops, and the work lands back on teams.

OCR Can't Interpret Documents

It extracts characters, not meaning.
It breaks on layout changes and ignores charts and visuals.

Enterprises Need

✓ Accuracy ✓ Scale ✓ Control

Copilots and OCR can't support thousands of files and documents. Agentic Analytics can.

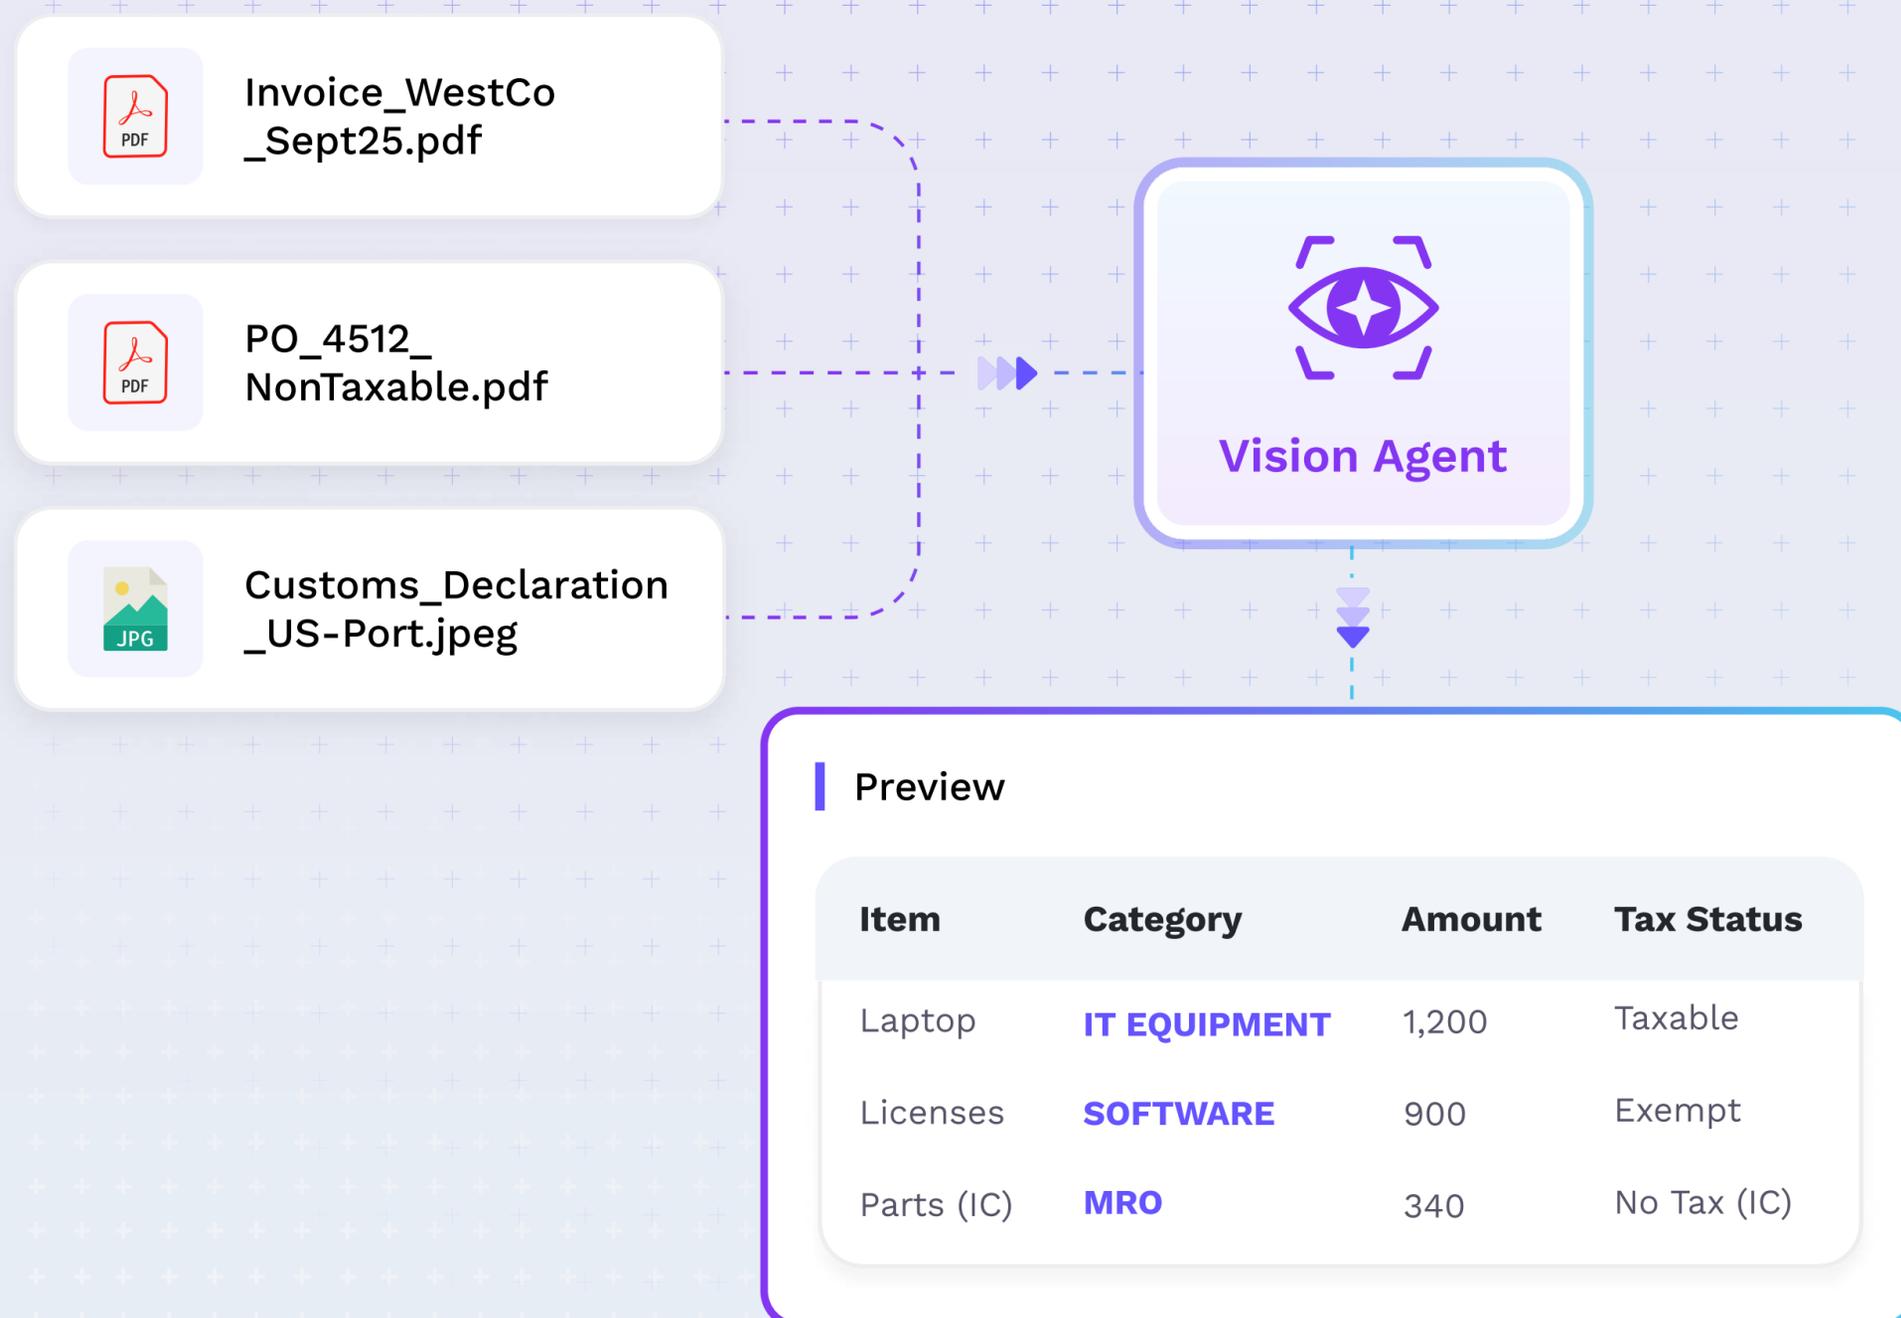

Vision Agent Converts Complex Documents Into Structured Data

It extracts fields, tables, and visuals with consistency at scale.

Every output arrives cleaned, validated, and ready for downstream workflows.

Unlock the Data Locked Inside PDFs and Documents With Vision Agent

Turn unstructured files into structured data you
can use across your workflows.
