

# Katalon True Platform

## The AI Platform for Software Quality

### The software testing problem

Software testing today is fragmented across multiple tools. QA teams rely on separate systems for automation, test management, execution, and reporting. As AI-driven testing emerges, this fragmentation becomes even harder to manage.

Katalon True Platform solves this by unifying the entire testing lifecycle in one governed environment. Teams gain a single platform that improves visibility, reduces complexity, supports the transition to AI-assisted quality engineering.

### The solution: Katalon True Platform

Built for regulated teams that need stronger governance, traceability, and release confidence.

### Key AI capabilities

Expand testing capacity with a built-in team of AI agents

### Differentiation

AI-native (not AI add-on)

All-in-one (vs fragmented tools)

Easy for citizen testers

# Katalon True Platform

## The AI Platform for Software Quality

### Who is it for

All Quality Engineering teams including

Automation  
Engineers

Manual  
Testers

Test  
Leads

QA  
Managers

### Product Capabilities

#### Test Automation

Powerful test automation for code-first and low-code workflows. Full CI/CD integration with AI-assisted test creation & maintenance.

#### Test Management

Unified planning, manual testing, reporting & analytics. A single source of truth across manual and automated workflows.

#### Test Execution Environment

Cloud test execution at scale. Run tests across browsers and environments without managing infrastructure overhead.

#### Production Insights

Extend quality monitoring into production. Real-user insights surface coverage gaps missed in pre-production testing.

#### Reporting & Analytics

Turn execution data into clear, actionable intelligence. Ask the Reporting Agent for what you need, get AI-generated reports in seconds, and give every stakeholder the visibility they need to ship with confidence, not hope.

#### AI Testing Assistant

Six specialized AI agents across the life-cycle from planning and design to execution, reporting, and production monitoring.

### Who is it for

All Quality Engineering teams including

Automation Engineers

Manual Testers

Test Leads

QA Managers

### Pricing & packaging

#### Team Edition

For teams delivering quality at speed of AI.

# \$2,000

Available via self-serve purchases

- ✓ AI-powered test creation, execution, bug reporting, and result analytics
- ✓ Manual testing - plan, design, execute, and log bugs
- ✓ Automation & Agentic testing - low-code to full-code
- ✓ Test Execution Environment - cloud & local execution
- ✓ Test Management - unify all tests in one centralized platform
- ✓ Test Reporting & Analytics
- ✓ Integrations - Jira, Slack, CI/CD, and more
- ✓ Digital support

#### Enterprise Edition

Scalable quality with enterprise security and governance.

# \$3,500

Available through 'Contact Sales'

Everything in Team, plus:

- ✓ Cross-project reporting
- ✓ Custom roles & permissions
- ✓ SSO, SCIM & enterprise identity
- ✓ Audit logs & compliance controls
- ✓ Live support
