

Maintenance Software Custom-fit for You

Improve efficiency and benefit from data driven decision making. DirectLine by Megamation is a comprehensive Computerized Maintenance Management Service (CMMS) platform complete with all the core features and functions needed by maintenance professionals – all customized and adapted to your specific environment.

Reporting and Analysis

Data driven decision-making with DirectLine's reporting and analysis tools. Built-in reports can easily be customized to meet your specific needs. Generate custom analytics on performance, costs, downtime, and key metrics.

Secure Infrastructure

Megamation is committed to the secure access, uninterrupted availability, and integrity of your data. Contact us to learn more about how we protect against threats, secure our firewalls, and configure our servers.

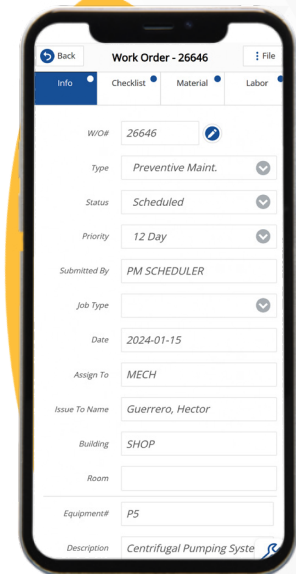

INCLUDES

DirectLine Mobile with AT-SITE[®]

Save your shop time and money.

Our AT-SITE[®] mobile design concept is a progressive web application that offers several significant advantages for maintenance teams.

It helps eliminate unnecessary travel time, enhances accuracy, and boosts efficiency. Access all your relevant maintenance data, such as purchase orders, manuals, invoices, permits, and inventory availability on your mobile device wherever you are.

Everything You Need in a CMMS

Keys and Locks

DIRECTLINE

DirectLine has everything needed for advanced maintenance planning and resource allocation for assets, equipment, and facilities.

Our SaaS solution features interconnected modules that we configure for your business; our in-house programmers then customize it to fit your precise workflows and processes.

A complete list of the modules in DirectLine:

Reporting and Analytics

- Built-in comprehensive analysis and reporting
- Customized for your needs
- Macro and Micro details with “drill down” style reports
- Consolidated reports across different functions with easy export feature

Work Order Management

- Turn work requests into work orders
- Assign to a trade, shift, department, or specific person
- Allocate parts and tools required for the job
- Attach any documentation – web links, AutoCAD, instructions, manuals, photos, and videos
- Update status and record details of work including time to complete and actual parts used

Preventative Maintenance Coordinating

- Update the schedule anytime
- Predefine labour, parts, and the tools needed
- Create PM single or grouped assets as well as a full calibration data sheet
- Attach any documentation – web links, AutoCAD, instructions, manuals, photos, and videos
- Flexible scheduler creates Work Orders by fixed scheduled date, a floating completion date, or a combination of both

DIRECTLINE

A complete list of the modules in DirectLine:

Asset Management and Tracking

- Track anything from equipment to vehicles to buildings
- Identify assets with serial numbers or any unique identifier
- Analyze both short and long-term costs
- Accurately measure its performance

Inventory

- Completely automate as much or as little of the inventory function as desired
- Automatically create purchase requisitions based on changes to inventory
- Issue parts from inventory based on demands generated by work orders
- Customize rules and procedures
- Set-up min/max rules per part or per warehouse

Purchasing

- Any kind of PO including blanket and restricted blanket POs
- Issue purchase cards for direct purchases
- Automated purchase requisitions of stocked or non-stocked items
- Secure workflow and password protected approvals
- Manage vendor contracts, 3-way vouchers, and retro charges

Contracts

- Issue work orders against any contract
- Create labor and materials estimates to stay within contract limits
- Purchase Order tracking
- Reconcile and apply costs then deduct from contract amount

DIRECTLINE

A complete list of the modules in DirectLine:

Health and Safety

- Identify, catalogue, and track certification and training requirements
 - For personnel and/or specific job categories
- Create schedules and track attendance for training and certification
- Catalogue and manage the progress of accidents or safety incidents
- Record the characteristics of an incident
 - Physical environment, severity, perceived causes
- Identify status of the employee's credentials at the time of the incident
- Track claims and send copies of required forms to insurance companies.

Staff Records

- Record any detail including address, wages, overtime, entitlements, training, health and safety
- Accessible by all DirectLine modules to help manage policies and procedures
- Track wages as a component of costs associated with a project

Hazardous Materials

- Higher level of detail than standard inventory systems including:
 - Where to store
 - How to store
 - Handling and usage requirements
 - Transportation and disposal
- Attach any static or dynamic document to any form in the system
- Automatically attaches to work orders for "hot" locations

DIRECTLINE

A complete list of the modules in DirectLine:

Documents and Attachments

- Attach any document to any screen in the system
 - Dynamic or fixed
 - Web links, URLs, AutoCAD, pdfs, Word, XL, photos, or videos
- Alert users to necessary information
 - Instructions, Manuals, Hazardous, Regulatory etc.
- Automatically include specific documentation with every Work Order
- Attach to any asset, item, material, or vehicle

Project Management

- All work, parts and costs are automatically recorded
- Manage simple or complex projects
- Unlimited number of project steps
- Budgets, commitments, and expenditures for each step
- Dynamic contingency allocations
- Track and manage expenditures and performance by contractor
- Analysis tools to measure the results and costs

Capital Planning / Preventive Maintenance Planning (CRF/PMP)

- Integrate capital planning with day-to-day operational concerns
- Track and maintain capital requirements of a portfolio of facilities
- Proprietary methodology can often save expense of total facilities condition audit
- Incorporates industry standards processes such as UNIFORMAT II hierarchy system and Facilities Condition Index

DIRECTLINE

A complete list of the modules in DirectLine:

Fleet

- Manage and track any kind of fleet
 - Cars, trucks, buses, vans, tow motors, construction equipment, etc..
- Comprehensive scheduling
- Tracking and database functions for parts, maintenance, issues, recalls, fuel, usage, and drivers
- Automated warranty alerts and claim forms

Utility Readings

- Specifically designed for meter readings with a focus on usage
- Monitor, analyze, and report on the utility costs
 - By building, by department or any other segmentation
- Schedule via best route to the location of every meter

Help-Desk Center

- Allow anyone to:
 - Create Work Requests
 - Review the history of a particular asset
 - Check status on any pending work orders
 - Review past actions
 - Users can still access Directline without being given full access

Tooling (Maintenance Tool Tracking)

- Reserve tools for specific certifications
- Provide sign-in/sign-out dates by tool or user
- Track calibration dates and calibration history
- Track calibration dates and history

- ✓ Access Manuals and Documentation

UNLIMITED PERSONAL TRAINING

Unlimited on-boarding and refresher training in your environment for your staff.

ONE-ON-ONE 24/7 SUPPORT

A dedicated Account Manager with in-depth knowledge about your implementation.

CUSTOMIZED TO MEET YOUR NEEDS

Every implementation is a highly tailored solution that fits your exact workflows and processes.

I love the new mobile system we deployed last year in our new packaging plant. All the technicians are using mobile phones to access their work schedule, write new work orders, check out parts from the crib, and complete their work orders. I cannot imagine a more efficient way to do business.
