

Manufacturing Intelligence for

Pharma and medical device manufacturers

Pharma and medical device manufacturers run tightly controlled production environments with strict procedures and validated processes, where even small deviations can affect compliance and output.

Factbird is set up fast, with minimal IT, and provides clear, real-time monitoring data for each line, then turns that data into action. Standardize how performance is tracked across sites, reduce hidden losses, and support compliance operations.

Industry Challenges

- Validating processes makes operational improvements slow to implement
- Frequent changeovers and line clearance slow down production
- Limited real-time visibility makes it harder to react to issues on the line
- Manual logging and compliance tasks add pressure on operators
- Heavy systems take months to roll out and drains IT resources

Factbird delivers

- Catch losses immediately and use real-time insights to improve execution within validated processes
- Compare runs and batches to identify issues sooner and reduce changeover impact
- Track stops and performance in real time so teams can react faster on the line
- Use clear stop codes, intuitive screens, and reports to simplify compliant logging
- Plug and play hardware gets you up and running fast with minimal effort

Results you can expect

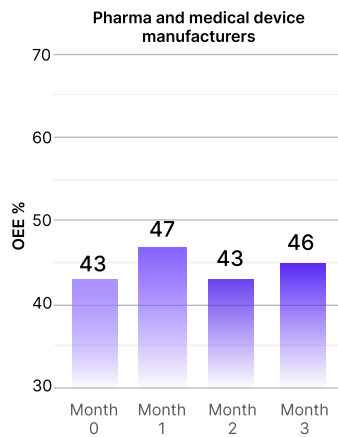

Pharma and medical device manufacturers achieve a 2-point OEE increase and 6% productivity improvement within just three months with Factbird.

Source: Factbird Benchmark Report 2026

Proof of impact

OEE and productivity increase within three months of using Factbird.

Baseline OEE (Month 0):	43%
Month 3 OEE:	46%
Change (points):	+2
Productivity increase:	6%

Quick return on investment

- Measure results before and after, by shift and by batch
- Up and running in days without burdening internal IT
- Fast and intuitive operator adoption
- Reuse proven templates, scale rapidly, see returns sooner

	OEE point increase	Productivity increase
Food & Bev	7 points	15%
CPG (Consumer packaged goods)	10 points	29%
Packaging and containers	18 points	45%
Pharma & medical device	2 points	6%
Industrial equipment and devices	9 points	23%
Construction and building	11 points	28%
Automotive	5 points	10%

In terms of hardware installation on our production lines, we were ready in half an hour. Now we can see the number of pieces and what was running on the line minute by minute.

– Søren Skamris Jeppesen, LEAN Production & Projects Specialist at Swedish Match
