

Your biggest cost. Your biggest blind spot.

If you don't know where the last dollar went—especially labor—you can't decide where the next one goes.

40%

of finance leaders don't trust their labor cost data

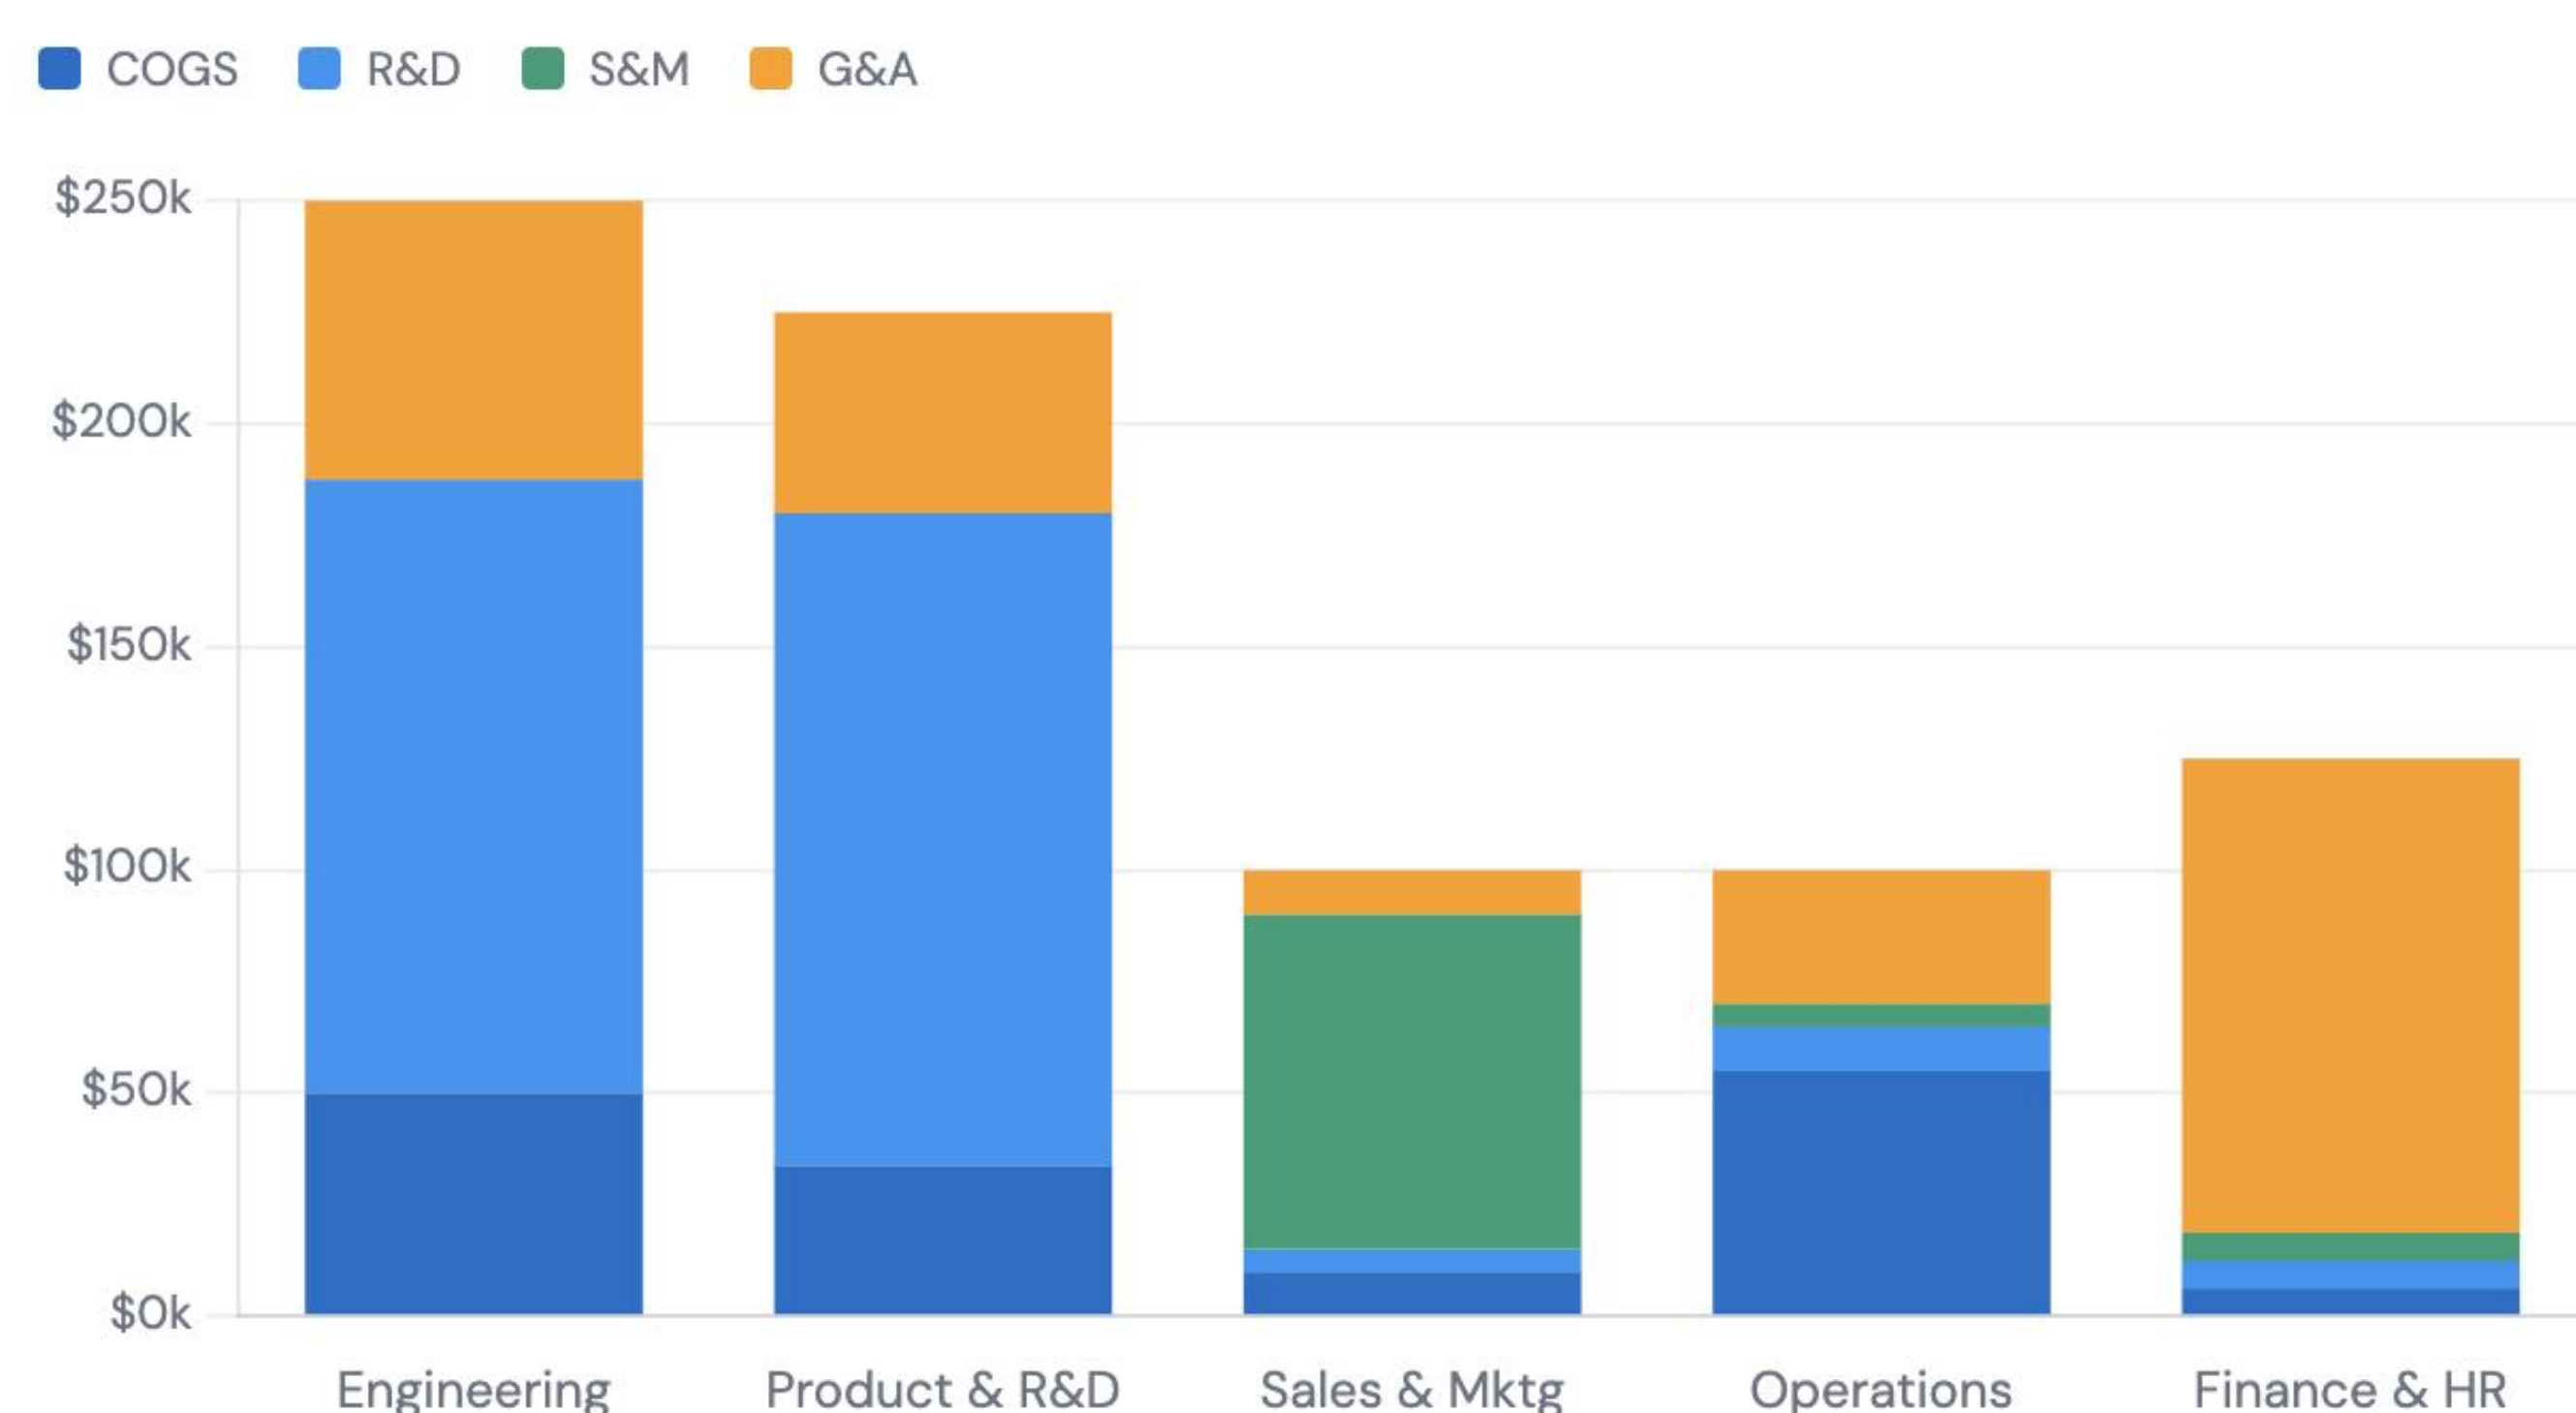

23%

have faced audit failures tied to poor labor records

50%

experienced budget overruns tied to inadequate labor tracking

Are we allocating labor spend in line with our strategic priorities?

SOUND FAMILIAR?

Every number is clean—except labor.

You can estimate hours. But an actual view—by project, by initiative—usually doesn't exist. And decisions don't wait.

You can't defend what you didn't capture.

When someone outside your organization asks to see the labor costs behind a number—investor, auditor, board—the records are either there or they aren't.

Finance and ops are working from different numbers

Finance has one view, ops has another. Suddenly the meeting is a debate about whose numbers are real. You lose the decision window.

No data means no warning

Overruns don't surface until they're already in the P&L—and by then the margin is gone.

Bring your biggest labor cost headache.

HOW CLICKTIME MOVES YOUR NUMBERS

- **Catch overruns before they hit the P&L**
See budget versus actual labor cost by project as it happens. Drill into what's driving spend before the quarter closes.
- **Audit-ready records, every day of the year**
Every entry carries an approval workflow and complete audit trail. Whatever the review—you're pulling a report, not rebuilding history.
- **Close faster with cleaner inputs**
Labor data categorized on capture means less rework at month-end. Hours flow directly to your systems—no reconciliation, no version conflicts.
- **Walk into every review with the answer**
No scrambling, no hedging, no "I'll have to get back to you." One source of truth means every answer is ready.

WHAT MAKES CLICKTIME DIFFERENT

- **Captures the footprints of your existing workflows**
Smart Match pulls from Google Calendar, Outlook, Jira, Zoom, and more—mapping hours to cost categories automatically. No surveillance.
- **Clean, categorized data at the moment of capture**
Hours tied to financial categories when logged—not cleaned up after the fact. No reconciliation required.
- **Flows into the systems finance already runs**
NetSuite, QuickBooks, Sage Intacct, Power BI, Tableau, and more. No manual re-entry, no replacement required.
- **Bulletproof labor data, proven at scale**
2 billion hours tracked. 99.9% uptime. Customers who've been with us for over a decade.

"We're able to make faster, data-driven decisions... fundamentally improving how we manage our finances, projects, and budgets." — Van Chang, Director of Finance
