How Arkal Automotive streamlined their global supply chain with Priority ERP

About Arkal Automotive

Arkal Automotive is a global leader in plastic injection molding solutions for the automotive industry. With multiple factories worldwide, Arkal specializes in lightweight, high-performance components that support car manufacturers in meeting evolving design, efficiency, and environmental requirements.

The Challenge

Before moving to Priority, Arkal was using different systems to manage their operations; systems that created silos, increased the risk of errors, and required manual workarounds that slowed down reporting and decision making. With multiple sites, different currencies, and teams working across various languages, consolidating data and maintaining visibility into supply chain and customer demand was becoming increasingly complex. As a growing global manufacturer, Arkal Automotive needed a single ERP platform to connect its worldwide operations.

The Solution

Arkal implemented **Priority ERP** as a unified platform to streamline operations across all factories and departments. The ERP system's multi-company, multilingual capabilities enable consistent reporting and simplified global consolidation. Supply chain teams now access real-time customer demand forecasts months in advance, while the built-in reporting tools allow managers to quickly generate Excel-based templates and tailor data to their needs.

On the shop floor, Priority's mobile applications transform warehouse and quality assurance processes. By scanning in real time, operators eliminated the need for manual documentation and reduced errors between floor activities and office data entry. With Priority's visibility and customization, teams gained full control across production, inventory, and financial processes.

The Result

By implementing Priority ERP, Arkal Automotive transformed its global operations, achieving greater visibility, efficiency, and control across all departments. Key benefits include:

- ▶ **Greater efficiency** with fewer costly mistakes
- ▶ **A user-friendly system** makes training new employees easier
- ▶ **Improved reporting**, especially in fixed asset management which saves time
- ▶ **Operational efficiency boosted** through streamlined reporting and collaboration across international teams
- ▶ **Global consolidation** of operations into one ERP enhances communication with HQ
- ▶ **Increased data accuracy** and actionable supply chain insights
- ▶ **Flexible customization** enables processes tailored to Arkal's unique needs

“The impact on our business from Priority is that it’s easier to use, it’s more user friendly, it’s easier to train people on, the reporting is better, the fixed asset reporting is better, and that saves us time.”

Gretchen Deitch, Controller, Arkal Automotive
