

# Metroselskabet Increased Compliance Audits by 50%

Established to revolutionize mobility in Denmark's capital Copenhagen, Metroselskabet have expanded the city's sustainable and efficient metro and light rail transit construction. The company has integrated green transportation into urban planning to help reach Copenhagen's goal to become the world's first carbon-neutral capital by 2025.

## The Challenge

Faced with mounting challenges in building metro and light rail systems, Metroselskabet recognized the limitations of their outdated risk management tools. As projects grew in size and complexity, the organization struggled to maintain efficiency and meet regulatory demands. Fragmented systems like Excel spreadsheets, email threads, and SharePoint made it increasingly difficult to manually track and verify critical information.

Adding to the complexity, EU-mandated Common Safety Method (CSM) standards required a robust and traceable risk management framework, which their existing tools could not adequately support. With multiple metro lines and a growing portfolio of projects, it was clear their fragmented system lacked the scalability to meet future demands.

## The Solution

Metroselskabet sought a modern, scalable solution that could unify data, streamline processes, and ensure compliance with CSM standards—one capable of supporting the demands of a high-stakes transportation infrastructure. After evaluating their needs, they turned to StandardFusion, a platform whose robust features

**“StandardFusion offers the same depth of information as a spreadsheet but in a far more intuitive and visually appealing format. It's simple, efficient, and gives us a quick overview of our risks.”**

Bryan Tamakloe, Safety Management Team, Metroselskabet

## RESULTS

Regulatory review preparation is 50% faster

Reduced administrative tasks by 40%

Unified and integrated multi-project oversight

align perfectly with their organizational goals and can scale with them as they expand.

Additionally, StandardFusion's support for quantitative risk methodologies ensured full compliance with EU CSM standards, providing regulatory alignment essential to Metroselskabet's operations.

By consolidating all risks, controls, and evidence into a single system, StandardFusion eliminated inefficiencies caused by scattered tools and provided a more cohesive approach to risk management.

**"We've gone from manually compiling risk evidence across multiple platforms to a centralized system where everything is accessible and connected. It's a game-changer for efficiency."**

## The Results

Metroselskabet achieved significant advancements in their risk management processes with StandardFusion by leveraging the platform's capabilities. "It's simple, efficient, and gives us a quick overview of our risks", with StandardFusion the company reduced administrative tasks by 40%, thanks to centralized data storage and streamlined evidence collection processes. This efficiency freed up valuable time for teams to focus on higher-priority tasks, improving overall productivity and effective governance across multiple projects and teams.

## Streamlined Efficient Onboarding

To ensure a smooth transition, Metroselskabet benefited from StandardFusion's onboarding support, "the StandardFusion team have been incredibly flexible and responsive. Weekly meetings have been key to solving issues quickly and tailoring the tool to our needs." added Bryan Tamakloe. These sessions and the ease of onboarding have enabled proactive problem-solving and seamless data migration, allowing the organization to hit the ground running with their new risk management system.

## Accelerated Compliance Audits

The centralized, easily accessible data within StandardFusion's platform has allowed Metroselskabet to easily streamline their compliance audits. Since the adoption of the GRC platform, preparing for their regulatory reviews is now 50% faster. Significantly reducing the time and organizational resources required for regulatory reviews.

## Improved Accuracy and Reduced Errors

"A single source of truth has transformed how we manage documentation," shared Bryan Tamakloe. By consolidating data into StandardFusion's holistic GRC platform, the organization achieved a 25% reduction in documentation errors, ensuring greater consistency and reliability across all projects.

StandardFusion is a GRC software platform that simplifies the complexity of information security compliance, risk management, and data governance.
