

PhishingBox Security Awareness Ecosystem

Security Awareness is a continuous process of training, testing, and remediation. PhishingBox provides a suite of tools and services to implement and maintain a comprehensive security awareness training program. Key components of this security awareness ecosystem are described below.

SECURITY AWARENESS TRAINING

PhishingBox provides security awareness training courses through a learning management system (LMS). Use our integrated LearningBox or use another third-party LMS. Training courses can include PhishingBox developed courses, courses from our content providers, or an organization's developed or purchased courses.

LEARNING MANAGEMENT SYSTEM

As noted above, PhishingBox integrates natively with LearningBox LMS. This easy-to-use LMS provides access to PhishingBox training courses along with training from our content providers. Though integrations, including custom API calls, the PhishingBox products can work with a third-party LMS.

PHISHING SIMULATION

Phishing simulation provides realistic emails to users to see if they react properly to such emails. When a user reports a simulated phishing email it improves the organization's net reporter score (NRS), which is a primary gauge of an organization's security awareness posture. Upon failure of a simulated phishing email, the organization can automatically enroll the user into remedial training.

KILLPHISH

KillPhish is an email plugin to help users evaluate emails and report such emails to an organization's security operations. Any reported simulated phishing emails improve an organization's Net Reporter Score or NRS. As noted above, the NRS is a primary gauge to monitor an organization's security awareness posture.

SECURITY INBOX

Phishing Inbox is a tool for administrators to manage emails reported by users. This tool provides automated responses and backend information for administrators to evaluate suspicious emails.

SECURITY INBOX

Identify and Eliminate **EMAIL THREATS**

With Security Inbox, you can identify patterns of email threats faster than ever. Deploy resources where your enterprise needs them and stop wasting valuable time tracking down false positives. Security Inbox gives you a place to centralize all email threats being reported and allows you to manage your own layer of blocklists combined with PhishingBox Advance Threat Graph (ATG) of email address, domain names, URLs, IP Addresses, and many other points of interest.

Lightweight THREAT IDENTIFICATION AND MITIGATION

Security Inbox has been built to solve the problem of bridging the gap between security training and daily threat operation management. Our endpoint software allows you to deploy and use Phishing Inbox quickly with any dedicated IMAP email account.

Threat Mitigation

Respond to the most pressing phishing threats quickly. Easily search for and destroy email threats in real-time.

Attack Replication

Automatically clone active phishing threats into simulated phishing campaigns. This gives your users a better idea of what to look for in their inbox.

Easy Integration

Security Inbox integrates seamlessly into your email solution and our KillPhish add-in for Microsoft 365 and G Suite.

KILLPHISH™ SCAN & REPORT

Pushing the **ENDPOINT'S EDGE**

KillPhish™ is an advanced email threat protection add-in for Microsoft 365 and Gmail. It enables reporting phishing and other types of threats. Each inbox's risk profile is unique, and KillPhish can help expose telltale signs of threats to your security.

KEY FEATURES

Inbox **TRAINING**

KillPhish™ helps users learn what to look for using each email as a learning opportunity, combined with security awareness training.

Multiple **SOURCES**

KillPhish™ gathers IP addresses, domains, email addresses, words and other likely known threat types from different sources.

Extending the **ENDPOINT**

KillPhish™ pushes your endpoint protection even further and helps users better determine a real threat vs legitimate emails.

PHISHING SIMULATOR

Fortifying the **HUMAN ELEMENT**

In today's environment, social engineering attacks are prevalent and increasing. The human element is often the weakest component in an organization's security. Attackers know this and exploit it. 47% of cyber security attacks such as social engineering, spear phishing and ransomware attacks are financially motivated. With PhishingBox, you can easily conduct simulated phishing attacks to test employees' security awareness as part of a comprehensive security awareness training program.

KEY FEATURES

Campaign **WIZARD**

- Simple target management
- Test scheduling
- Real-time notifications
- API & webhooks
- No software to install
- Multi-client support
- Easy-to-use interface
- Advanced reporting

Template **LIBRARY**

- Pre-built phishing templates
- Intuitive WYSIWYG editor
- Language localization
- Templates tiered by difficulty
- Micro-learning compatible
- Effective landing pages
- Fully customizable
- Custom phishing domains

Robust **LMS**

- Easy enrollment
- Course tracking & reporting
- School library
- SCORM support
- Partner courses
- Customizable courses
- Dedicated portal
- Course reminders

MSPs, ask about our multi-client and whiteboard options.

SECURITY AWARENESS TRAINING

Security Awareness Training is
CRITICAL

The threat from cyber criminals is not going away. Training your end users helps to minimize the threat from phishing and other social engineering attacks.

LEARNING MANAGEMENT SYSTEM (LMS)

Educating your team to detect **SECURITY THREATS**

With PhishingBox's Learning Management System (LMS), our team of experts will go to work creating and executing phishing simulation tests, along with security awareness training. When time is of the essence, we can get your company up and rolling in a matter of days. We use best practices to change the templates and techniques to provide optimal testing. It is critical to test employees with numerous techniques in order to expose any security vulnerabilities.

KEY FEATURES

Phishing Failure **AUTO-ENROLL**

You can easily filter employees and assign training. With the auto-enroll on failure enabled, remedial training is assigned automatically.

Content **LIBRARY**

Each account comes with free courses to easily assign training to employees on security awareness and related topics.

SCORM

Create full courses by uploading SCORM zip files and track the progress of your users' security training education.

*We also work with other Learning Management System, such as SmarterU and Moodle.
