

MEASURE WHAT MATTERS

The amount of time it takes for the business to gather and compile data that exists in multiple sources can make what was once “new” information stale and out-of-date. People within an organization need clear and easy visibility to the state of their business. But the reality is, they are basing decisions off of data that is unreliable, incorrect, or old. Without a real-time analytics environment that is connected to source data, people are stuck reacting to outdated information instead of being proactive strategists.

Real-time, Relevant, Powerful Financial Analytics

Hubble connects data from every facet of your organization to your ERP for personalized dashboards and visuals. Hubble innately understands the intelligence and structure of your ERP—the center of all your financials. This real-time connection to the ERP ensures that you have all the data you need at all levels of the organization. Because of this, it's easy to clearly and concisely show the state of the business anywhere, anytime.

With complete, real-time results, you no longer have to troll through data to understand what's happening in the business. It's easy to go from powerful key performance indicators to the transactions that support them in real-time. Everyone feels confident in what they are seeing, which drives immediate results.

Measure performance with vivid dashboards

Real-time dashboards are personalized so users can discover beautiful, timely, relevant insights.

Easily integrate all your financials

The power to integrate all your financials together in real-time, regardless of the volume of data or number of systems.

Immediately actionable

Anytime, anywhere access to your personal and business analytics on the go.

Features

Hubble Financial Analytics

KPIs & Scorecards – Go above the noise to quickly and easily see what's happening in the business with visual markers of success. Drill down when you need to.

Dashboards – Flexible, user-driven dashboards that combine images, tabular views and stunning visualizations.

Collaboration – Add context to your data with discussions. It's all searchable and provides a place to connect industry expertise to the results.

Alerts – Monitor critical information and be notified when something you care about happens, like budgets exceeding actuals, so you can focus on goals. Focus on the business to stay proactive, rather than reactive.

Approvals – Create a workflow of who needs to see information, and when, so you can stop chasing emails. See where everything is in the process at any time, and automatically notify users when their action is needed.

Mobile – At your desk or on a tablet, easy access to information that you need to make critical decisions whenever you need it.

Real-time ERP Integration – A real-time connection to your data means decisions are based on today's information. Tight integration to the ERP makes the product quick to implement and end user friendly.

Extreme Performance – Breathtaking performance for big data challenges and multiple data sources.

Drill Down – Get confidence back in your numbers. See the big picture but dive down to the transactional details if needed.

Integration – Supplement ERP data centrally and eliminate disparate systems used for reporting, analytics and planning to maximize efficiency and eliminate wasteful spending.

Areas like Sales, HR, Marketing, Supply Chain, and more can access their own relevant dashboards for quick insight into information that's relevant to them.

"As a company that prides itself on high performance, we knew we couldn't come out on top using spreadsheets. Hubble really knocks it out—their approach to performance management is transformational."

– Danny Bazan, Zuffa
