

POWER TO THE PEOPLE

Reporting is an essential function for any successful business – so why are so many companies still making compromises? Your ERP system holds all your financial transactions, but it's often difficult to analyze and manipulate that data in a way that business users can easily consume. In order to try to fix this critical problem, companies have invested in additional systems that sit outside of the ERP – causing additional problems like stale data, version control issues, and poor data integrity. Despite these often heavy investments, data dumps and spreadsheets are still the most common ways companies manage their reporting needs. Companies are left to assume that there is just no easy way to understand their data.

Real-time, End User Inquiry and Reporting

Hubble reporting is the only real-time reporting solution that enables businesses to work with live ERP data. By understanding the underlying structure and intelligence of the ERP, Hubble's reporting capabilities connect the whole business around a single source of truth for consistent, accurate decision making. Hubble allows you to report over any module in the ERP – from GL to accounts receivable, to manufacturing or inventory.

Instead of reporting being a function that lives in IT, Hubble makes it easy for end users to create and manage their own ad hoc inquiries or reports. As a user, you have the ability to view data at summary level, or drill down right down to source transactions in real-time. The calculations you are currently doing in spreadsheets can be managed in Hubble just the same – only now everyone in the business is working from the same version of the truth. When this happens, version control and data integrity issues disappear, and processes like month-end close, report requests, and flash reporting become simple, streamlined, and fast.

Create and run reports super fast

Use prebuilt templates, or create your own in minutes, and run them in seconds.

No specialist knowledge is required

Hubble understands the underlying ERP system, so users can easily investigate live, secure data on their own.

Everyone connects around the truth

Accurate, relevant, timely data is accessible throughout the entire organization for confident business decisions.

Features

Real-time – Direct data connection to the ERP ensures real-time information.

Tight-fitting ERP Integration – Purpose-built intelligence makes Hubble end-user friendly.

Prebuilt Templates – Start with hundreds of customizable prebuilt templates for quick results.

Ad-hoc inquiries – Slice and dice data for interactive data discovery and analysis.

Flexible Custom Reports – Safely build custom reports without technical intervention.

Drilldown to Source Data – Drill down, up, and across transactional or summary data.

Fast Performance – Amazingly fast results means quicker, more accurate decisions, and less frustrated users.

Plug and Play – Installs quickly and painlessly, so there is no risky, complex project.

“Hubble feeds our whole organization the information it needs to take action.”

– Alan Whitman, Financial Controller,
Associated Foods

PURPOSE BUILT FOR YOUR ERP

JD Edwards

- Supports all versions of JDE World and EnterpriseOne
- Complete, simple solution for live inquiry
- Absolute data integrity and reduced costs during your JDE 9.1 upgrade

Oracle E-Business Suite

- Upgrade to R12 and streamline your Oracle reporting
- Leverage Subledger Accounting and empower your financial end users
- Get control of Excel and SQL downloads

CHANGE THE STATUS QUO – GO FULL THROTTLE WITH YOUR REPORTING PROCESSES
