# Scribe Online
# Integration Service (IS)

**Integration Services (IS) brings your customer data anywhere it's needed so your applications can create business value faster. IS simplifies complex cloud integration, enabling your organization to deliver accurate information across systems quickly and consistently without software, coding or maintenance.**

## CLOUD INTEGRATION - MAKING THE COMPLEX, SIMPLE.

At Scribe, we set out to make complex cloud integration simpler for companies and to create value faster. We did this by creating an intuitive visual interface for IS inspired by a programming language developed for children! The new interface makes integration accessible to people without deep IT programming backgrounds, freeing up valuable senior engineering resources, speeding implementations and reducing total cost of ownership (TCO).

Next, it needs to work everywhere, right now.  Scribe Online IS takes care of this with a true cloud platform featuring a cloud agent, as well as, an optional premise based agent.

Finally, it needs to be collaborative. Today's integration challenges often involve different departments, IT resources and implementation vendors. Everyone needs to work together seamlessly to develop the most effective cross functional integrations. IS offers invite, de-invite and other collaborative features within the service to make working together easy.

## SEAMLESS INTEGRATION SERVICES

IS delivers seamless and secure integration of your customer data with critical business applications such as CRM, ERP, Sales and Marketing Automation. Updates to customer information are captured and reflected in all relevant systems ensuring customer data is always current and accurate across the organization.

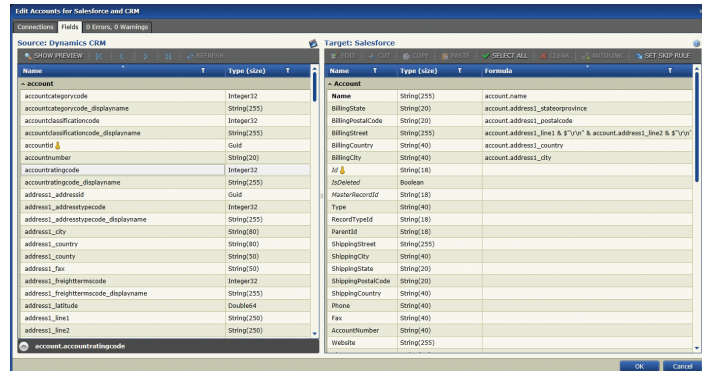

Scribe Online offers an advanced visual process definition editor.

## KEY FEATURES

Cloud-based Console

Invite & De-invite Users

Usage Monitor

Scheduling

Cloud Agent

On-Premise Agent

Bidirectional Data Integration

Process Definition Editor

Query Builder

Field Transformation & Formulas

Multi-operation

Update Source

Preview & Debugger

Fuzzy Matching

## MAKING YOUR INTEGRATION A SUCCESS

The IS wizard guides users through the process of defining an integration, eliminating the need for custom coding and IT maintenance. Users choose from a basic field mapping screen for simple integrations or an advanced process definition editor with custom queries, if-then logic, source and target lookups, for each child loops, and the ability to

Scribe Online offers basic drag and drop field mapping.

update source rows based on data returned from the target. Guiding you through the process, our online training, extensive documentation and free live technical support help you through each step in the process.

## PARTNERS BENEFITS

Scribe Online IS offers partners the ability to speed the development of new integrations and to package applications, integrations, and services into relevant solution bundles that can be resold to target industries. Generous partner programs that include training, co-marketing and technical support are available for Independent Service Vendors (ISV), System Integrators (SI) and Value Added Resellers (VAR).

## TRY IT FREE

Scribe IS packages include a predictable monthly cost and flexible contracts that allow for annual or monthly billing cycles. But before signing up, try it free for 15 days with no obligation at **www.scribesoft.com/free-trials**.
