

### Join the Movement to a More Agile Enterprise

To push the limits of continuous delivery, IT now requires a calculated balance of structure and flexibility. These demands must be met without compromising on things like tracking, visibility, compliance and security. ChangeGear was engineered to consolidate IT change records across the enterprise, boosting collaboration between development and operations in the new agile enterprise.

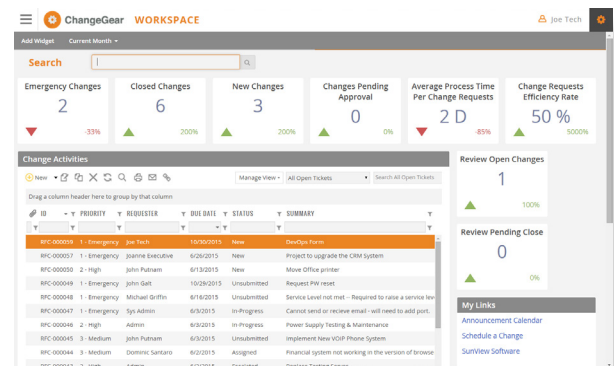

You can easily integrate ChangeGear into your DevOps toolchain to automate the tracking of change records, allowing you to increase release frequencies. Eliminate release bottlenecks with streamlined processes for both ITIL and agile development changes while maintaining standard IT control and change visibility requirements. **The future of change management is here.**

### Streamlined Release Processes

Define dedicated ITIL and DevOps processes to speed approvals and manage the documentation needed to support high velocity releases.

- Support multi-modal processes
- Increase efficiency with automation
- Eliminate release bottlenecks

### DevOps Toolchain Integration

Integrate with your third-party tools with ChangeGear's RESTful API. All releases are automatically documented, including important details like when the change was made and who made it.

- Gain visibility into DevOps
- Automate collection of release artifacts
- Track code & configuration changes

### Complete Change Visibility

Gain visibility into code and configuration changes throughout the organization by creating a central system of record of all IT changes.

- Strengthen visibility & metrics
- Streamline compliance reporting
- Reduce mean time to resolve

### Cross-Team Collaboration

Keep everyone informed with ChangeGear's powerful dashboards, notifications and alerts, enabling more peer reviews and collaboration around releases.

- Streamline CAB meetings
- Shorten time to gather Ops requirements
- Bring Dev & Ops teams together

#### Select Change Management Mode:

#### ITIL

Use the ITIL framework for traditional Change process with CAB approval

#### DevOps

Create Change record for Agile method of continuous delivery

#### Business

Use for non-IT Change control process
