

Patricia® App

With the Patricia® App, we've taken some of Patricia®'s most important features for attorneys on the move, straight into your iPad or Android tablet. Here, you can search for and view your cases and documents, log time and check your terms – excellent for when you're on the run.

Log In

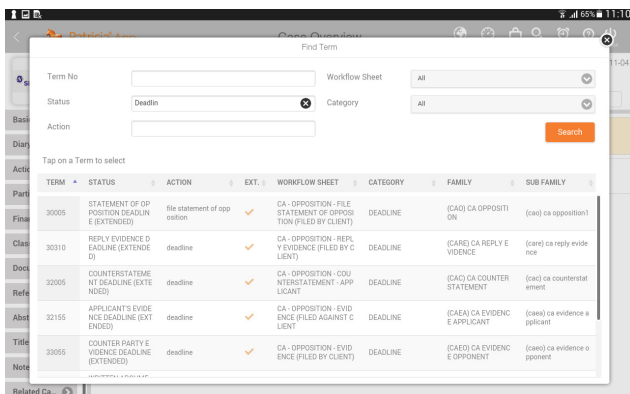

Secure and easy access: you log in using your usual Patricia® username and password via a Secure Socket Layer connection (SSL).

My Terms

The first page you see is the My Terms page. Here, you can view your terms, sort them by several different criteria and apply filters to the result. You can choose between different views to easily show captured information based on your preference of card view or list view.

Search

You find yourself at a client meeting or at a conference and need access to case and name records for a particular case? You can easily locate the necessary case using the Patricia App's easy to use search function. Once you have located the case, you have instant access to detailed information from the case similar to the case summary used in desktop Patricia. Simply touch the down arrow for each section listed to reveal its data. You can view term information, party details, actions, diary information, related cases and much more. You can even view and edit notes saved on your case.

Time Logging

While you are on the run or at a conference and need to capture those hours, the time logging allows you to create clocks that are accessible both in Patricia® App and the desktop Patricia®. You add Clocks, start or stop previously created clocks. Review details of previously generated clocks and modify details relating to them before finally submitting them on the case for billing.

Family Map

In this version, we have also included our Family Map functionality. The Family Map gives you a geographical representation of an IP

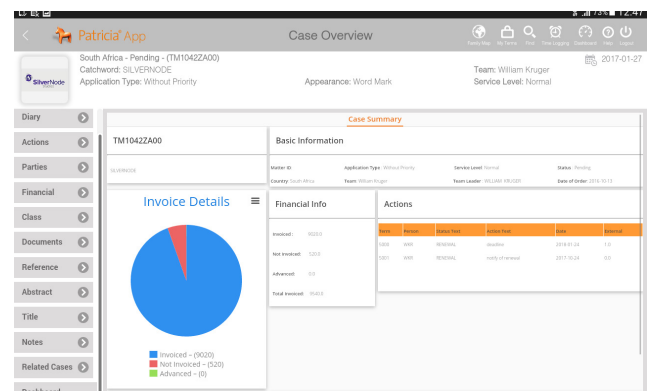

portfolio as filed across the world. This map is divided into the various countries and each country is color coded to match the status of the cases. This allows you to see the status of a portfolio at a glance! You are not limited to only viewing the high-level detail as you can drill down into each country to view the individual cases. Simply tap on a country to view all the case information!

Document Handling

Great strides have also been made on document handling from within the app. You can now attach documents to terms or delete documents completely. We've included a document preview option and the ability to edit document properties such as the document name, document category and soon. To further extend the functionality you can now also add documents directly from your tablet to any existing case!

Dashboard

The last important addition is the Dashboard which allows you to create custom dashboard reports. The customizability is not just limited to creating the reports though as reports can be deployed to specific users. This means that vital metrics are deployed to relevant individuals as soon as they log into the app!

Download

The Patricia® App is available for download on the App Store as well as on Google Play. A true work horse – in your pocket!
