Meet Your New Front Desk

Teem Visitor Management

Streamline the Guest Experience

- Give visitors a positive first impression of your company
- Cut time wasted by front desk staff and employees
- Improve building security and compliance
- Go paperless without losing records
- Provide administrators with an easy-to-manage solution

Make a Positive First Impression

Send the right message about your company by having visitors check in using a sleek iPad and hardware combination with a customizable home screen. Your guests can fill in their info upon arrival, or employees can pre-register them for an effortless sign-in process.

Intuitive Product, Accessible Hardware

Teem Visitor Management runs on iPads and provides a secure interface that simplifies the check-in process for visitors and is easily managed through a web-based admin dashboard.

Don't Keep Guests Waiting

Hosts receive SMS, email, or chat notifications when their visitors check in. Customize the hosts that are visible to visitors to prevent unplanned visits for specified groups. Hosts can be automatically synced using SSO, Active Directory User Sync, or SAML.

Same Signatures, Less Paper

Require guests to sign NDAs or other contracts as part of the check-in process. Signed contracts are stored in your Teem account, Dropbox, or Box. Get rid of paper while still having convenient access to a list of visitors and their contracts.

Easy to Deploy, and Manage

A cloud-based dashboard allows you to easily configure and make changes to each display – regardless of where it's located – by simply logging into your account. Plus, Teem has third-party integrations to connect with your existing systems.

Secure Wi-Fi and Guest ID

Visitors are able to print out their own photo ID badges at check-in. And with our ClearPass integration, visitors also receive unique credentials to temporarily connect to a secure guest Wi-Fi network.

Did you Know?

Teem's cloud-based platform makes activity-based work easier for thousands of companies around the world, including LinkedIn, Box, Airbnb, and GE. Successful businesses use Teem to optimize their workplaces, save millions, and help employees work more efficiently.
