DPOrganizer

Product overview

DPOrganizer is a flexible and easy-to-use software to help your organization **comply, collaborate** and **communicate** within all your data protection needs.
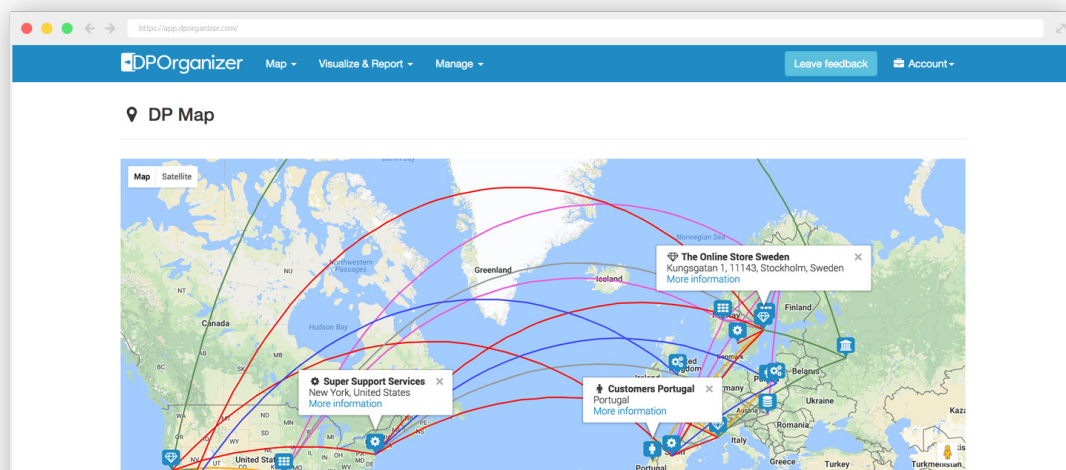

Comply

Compliance starts with taking stock and understanding all the ways your organization uses personal data. DPOrganizer has a built-in data import functionality, allowing you to use your existing databases and giving your data mapping a head start.

An intuitive process with input wizards will guide you through the entire mapping process.
The data mapping can either follow the GDPR logic or Processing Flows, depending on your own organization's experience with data mapping.

Once the initial data mapping is completed, the **DP Structure** tool allows the user to select and lay out any segment of the company's data protection ecosystem in a clear and clean format.

To get a fresh perspective you can use **DP Map**. This feature allows the user to visualize their data on an interactive map. DP Map is an excellent tool for visualizing the relationships between the various stakeholders and data entities. It provides compliance officers with a visualization tool that makes your data protection activities easy to understand.

Collaborate

Collaboration allows companies to be more efficient and proactive in their compliance activities. It can help identify risks and strengthen partnerships. DPOrganizer helps organizations collaborate internally and externally.

For internal collaboration, **DP Manager** is a tool that helps the user delegate and automate compliance tasks within an organization. Future reviews can be scheduled and automatically initiated. DP Manager allows the data protection officer to engage with internal stakeholders, notify them by email, monitoring updates and accept suggested changes.

For external collaboration, DPOrganizer comes equipped with **Vendor Manager**. This tool allows companies to build relationships with external data processors. The dashboard keeps you in control and lets you see all your vendors, pending requests, and completed reviews.

Communicate

Clear and frictionless communication can save you time and resources. On this front, DPOrganizer has built various features to facilitate communication with supervisory authorities, as well as with the individuals whose data you handle.

DP Report is one of the most versatile tools within DPOrganizer. It allows users to generate customizable reports that can be branded with your company's logo. These detailed reports can be used for internal audits, as well as for responding to supervisory authorities.

Transparency Widget allows individuals to see what personal data your business holds about them and how it is used – a proactive way to promote trust and respect.

DPOrganizer gives you the tools and confidence to comply with the latest data protection regulations. DPOrganizer adapts to your particular needs.

DPOrganizer is building the world's best data protection management software.
