

INSTANT ON-PREMISE DATA WAREHOUSE FOR YOUR CLOUD DATA

COPY ANYTHING TO ANYWHERE

Sesame Software's **Relational Junction** Data Warehouse Builder simplifies compliance, reporting, and data integration by creating and continuously synchronizing a local data warehouse that perfectly mirrors your Cloud application, as well as database-to-database incremental copy.

BENEFITS

Backup Cloud data, including custom objects and fields, long text and attachments

Reporting Data Warehouse - Develop reports using popular reporting / analytics packages

Compliance - keep all versions of all records in the database, including deleted records

Always in sync with your Cloud data with frequent incremental replication

Integrate with other data sources using **Relational Junction ETL Manager**

Supports hub-centric integration model

No programming, No data mapping

Low Total-Cost-of-Ownership

24/7 U.S.-based Customer Support

CROSS-PLATFORM

Easily fits into your corporate IT infrastructure. Windows or UNIX

Compatible with PaaS platforms: AWS, Microsoft Cloud, Rackspace, etc.

Use any database, including SQL Server, Oracle, MySQL, PostgreSQL, DB2, Sybase, GreenPlum, Actian Vectorwise, Teradata, Snowflake

FUNCTIONALITY

Replication only copies changes

Tracks all changed and deleted data

Takes only minutes to install and create your warehouse

History tables record a complete snapshot of each record before it is modified

Fault tolerant error handling - survives network outages or Cloud disconnects

All Cloud objects are automatically created as tables and all fields are created as columns

Cloud schema changes are automatically updated in the warehouse, which means no broken data model or integrations

Copy database-to-database for instant data warehousing of applications needing offline reporting

PERFORMANCE

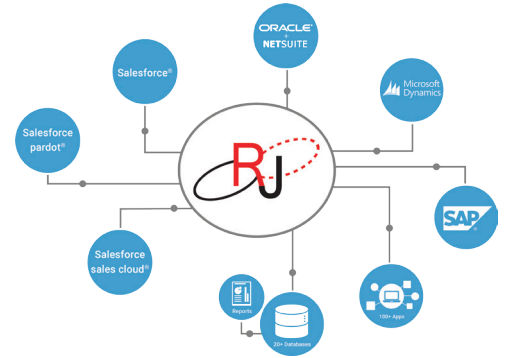

Blazing multi-threaded performance

All relationship fields are indexed for performance

Patented technology makes this the only product that can handle an unlimited number of records

DATA INTEGRATION

Relational *Junction* ETL Manager minimizes the time and cost of data integration by using a familiar and powerful SQL interface to all data sources. On-Premise or Private Cloud deployment eliminates any privacy concerns.

FUNCTIONALITY

Intuitive web User Interface

Handles time zone changes between databases

Automatic timestamp filtering for incremental logic

Connects to databases, flat files, XML, or API-based applications.

Standards-based SQL interface allows any SQL construct, including table joins and unions

Enables complex business processing with database triggers, functions, and stored procedures

FAULT-TOLERANT

Captures and logs rejected records

Reports extensive load statistics

Allows termination at point-of-failure or continuing with error logging of rejected records

Automatic emailing of job logs for failures or all logs

EASE-OF-USE

Developers are productive within minutes. Complete training is a 1-hour webinar session.

Compatible with source control tools

Java for cross-platform compatibility on all hardware

KEEPING YOU CONNECTED

Relational *Junction* can connect to almost 100 cloud data sources, create a mirror warehouse, and incrementally and frequently copy your data.

SCALABLE. POWERFUL. RELIABLE.

Sesame Software has been proudly supporting mission critical business needs in Fortune 500 companies since 2004 for Salesforce.com and NetSuite customers.
