Identity Anywhere™

Identity Management
as a Docker Container

Your business runs on back-office applications. Each one is managed separately resulting in added complexity to employees, partners and customers. This ultimately impedes progress. Avatier Identity Anywhere brings all of these separate applications, cloud services and even employee assets together and allows your organization to manage them as one system. Our identity solutions empower C-Suite Executives to use a digital dashboard to run and manage their business.

Introducing Identity Anywhere, the world's first Identity Management as a Container (IDaaS) platform based on Docker containers making it the most portable, scalable and secure solution possible. Docker container technology allows Identity Anywhere to run anywhere: on any cloud, on premise or a private cloud instance hosted by Avatier.

Identity Anywhere™

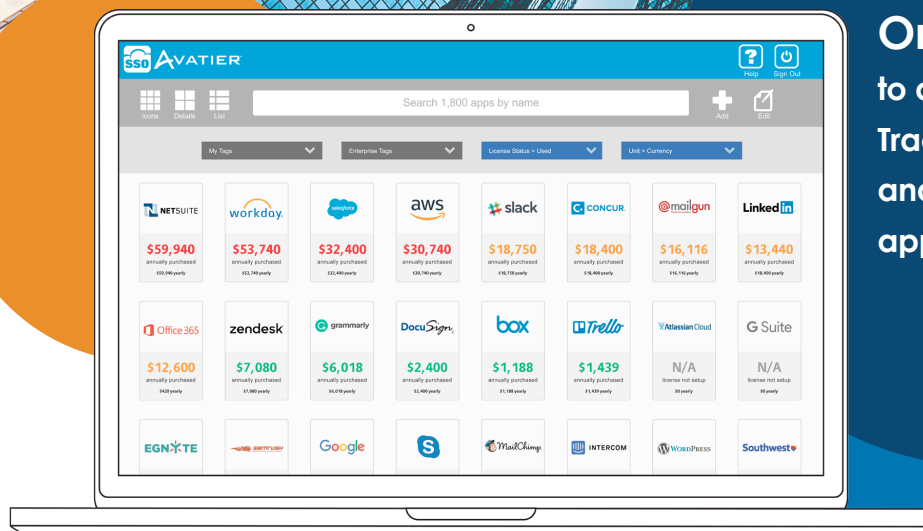

Avatier Everywhere

Lifecycle Management

Automated user provisioning is accomplished by leveraging existing business rules and attributes from spreadsheets, HR systems, or APIs. Identity Anywhere can serve as your one-stop shop for requesting access to enterprise and cloud apps or assets. It is as easy as shopping online, making business users more productive.

Access Certification

Easily schedule certification campaigns to meet your governance controls and ensure users have the appropriate access to resources. Conduct access and asset certifications from any device. See your list of audits due along with un-reviewed access and assets. Practice security and compliance management with the touch of your finger. Approve and revoke access. Allow exceptions and more.

Avatier Single Sign-On

One-click access
to all of your applications.
Track total license spend
and reveal true cloud
app usage.

SSO

Securely give employees, partners and customers access to public and private web applications. Avatier SSO leverages existing groups, OU's and users in your native directory to delegate web application access. With built-in SaaS licensing management, your cloud subscription costs can be cut by 30% or more. SSO integrates with Identity Anywhere Lifecycle management for automatic user provisioning and deprovisioning.

Password Management

Self-service password reset eliminates your number one help desk request and synchronizes one strong password across your core applications and cloud services. Identity Anywhere feature complete password reset automation enables your organization to get work done faster without interruption.

Cloud-only identity is not enough:

- Legacy on-premise systems
- Governed by tight compliance
- Lack of trust in cloud security

The hybrid identity crisis:

- Legacy maintenance and upgrades
- Separate cloud/on-premise models
- Labor intensive operations management
- Lacks CPU memory auto-scaling
- Manual updates
- Requires load balancer management

avatier.com

Avatier is the Identity Management company of the future with innovative solutions for today. Avatier develops a "state of the art" identity management platform enabling organizations to scale faster, innovate quicker, conquer and embrace change, to dominate competition worldwide. Our Identity solutions are delivered using the latest Docker container technology providing maximum flexibility, scale, and security to our customers. Our identity management and access governance solutions make the world's largest organizations more secure and productive in the shortest time at the lowest costs.
