◆ Jira

Software Test Solutions Built for Enterprise Agile

If you've switched to Jira as your enterprise agile planning tool, you should also be evaluating test management solutions. See how Tricentis qTest compares to both Quality Center and popular Jira test management add-ons.

Real-time Jira Integration

Quality Center's integration is based off scheduled syncs, which means testers and developers don't have access to the most up-to-date information, leading to delays in resolving issues and slower release cycles. Tricentis qTest integrates with Jira in real time using Atlassian webhooks. With a seamless integration and real-time, two-way updates, teams using qTest with Jira have the most up-to-date information so they can resolve issues as they arise and get to market faster. Test results are also displayed on Jira issues as soon as they are logged in qTest, so developers and BAs have immediate access to results.

Best-in-Class Reporting

Quality Center's reporting interface is difficult to use and often requires a dedicated resource. Creating reports is a time-consuming process that requires teams to know SQL and Visual Basic, which limits the organization's ability to get a quick picture of release readiness. Tricentis qTest offers the industry's leading executive-level QA reporting tool, with 30+ customizable out-of-the-box reports that help you track and improve application health and quality over time.

Flexible Ecosystem with Open Source Support

Recent research shows that more than 80% of teams rely on open source test automation tools, but Micro Focus makes it difficult to embrace open-source test automation, which limits the amount of test automation coverage teams are able to achieve. Tricentis qTest offers out-of-the-box integration with popular test automation tools and the flexibility to integrate any tool or framework, so teams can automate more and centralize their test automation strategies.

Built for Testing in Agile & DevOps Environments

Tricentis qTest is a modern testing platform built for agile and DevOps workflows, with a flexible ecosystem that allows teams to integrate with the enterprise agile planning, test automation and DevOps pipeline tools of their choice, so that the entire SDLC is linked, from planning to development, testing and delivery.

80% Of Customers Integrate Tricentis qTest with Jira
