

qTest® Launch Automate More, Manage Less

In a development world moving at the speed of DevOps, it is crucial to have a scalable test automation strategy. With qTest Launch, enterprises can centrally manage test automation scripts and test machines, increase test automation efficiency and achieve faster time to market.

Scale Test Automation

By centralizing automated test execution, qTest Launch enables enterprises to scale test automation from hundreds to thousands of test runs across different test machines.

Manage Test Machines

Whether you are testing on a local machine, against a virtual machine, or in a dedicated test environment, qTest Launch provides a single location for test machine management.

Simply Automation Execution

Scheduling test automation across multiple machines is easy with qTest Launch. Kick off tests individually or in bulk, and schedule them on a recurring basis to power continuous testing initiatives.

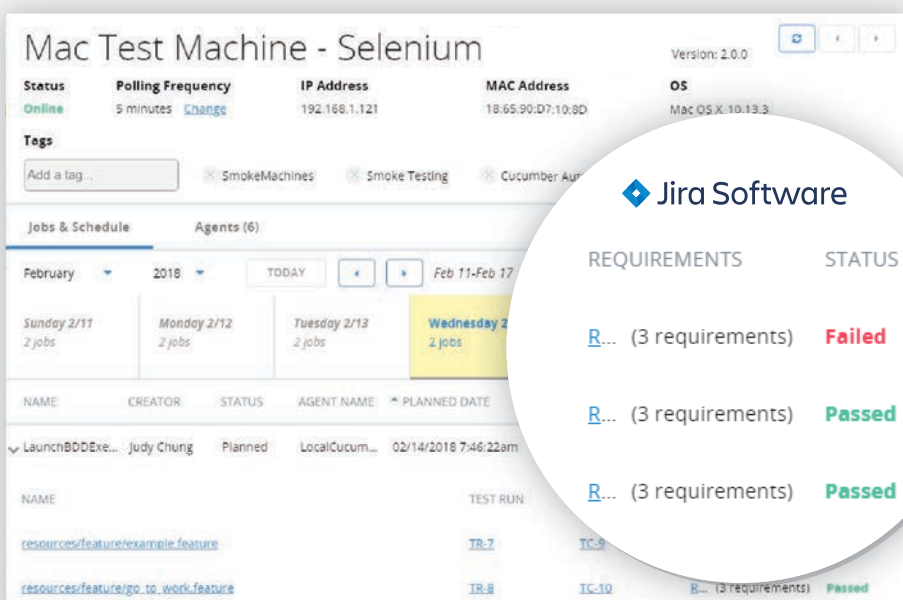

Flexible Test Automation Integrations

Whether you are testing web, mobile or client applications, a single interface can help streamline test automation to save time and increase visibility. With qTest Launch, QA teams can centrally configure automated testing across open source, commercial and custom built automation solutions.

Real-time Analytics

Ensure efficient execution of automated testing across projects with enterprise-level reporting. Using the qTest platform, quickly access the latest test automation run results, pinpoint trends and identify additional tests that are good candidates for further automation.

Increase Automation Coverage

Test automation can quickly become separated from business requirements if not properly tracked. With our real-time integration to ALM tools like Jira, teams can tie automated test results to business requirements to get the full picture of test coverage.
