# The Power BI Visioning Program

Expertise & experience for your Power BI journey

# Your Vision - Our Expertise

Microsoft Power BI is the leading business intelligence and analytics platform. It offers unparalleled flexibility for data visualization modeling and analytics. There are countless opportunities to leverage Power BI to gain increased efficiency, competitive advantage, lower operating costs, and insights.

Along with its advantages come increasing options and therefore complexity.

With Power BI's constantly evolving and expanding environment, it is certainly challenging – if not impossible – for enterprises to understand and successfully put the pieces of the puzzle together to successfully scope, implement, educate and iterate, without an expert partner.

The Power BI Vision Program has been designed to arm our clients with unparalleled insight and foresight for their Power BI journey. With hundreds of successful projects, our process has been honed to vision, disseminate and document a robust yet flexible framework and actionable process to drive success with your enterprise data strategy with Power BI.

# Tailored to your objectives

## Vision Creation

We connect the dots between your users' requirements, Power BI features and our real-world experience to switch the light on for stakeholders to envision the possibilities.

## Training & Continuous Learning

We create training programs that are tailored to your organizational needs both for now and as your educational needs mature.

## Rapid Proof of Concepts

We use rapid proof of concepts to provide a path for rapid iteration, innovation and to prove capabilities to senior stakeholders in a matter of days.

## Best Practice Methodologies

We bring our wealth of project experience and deep product expertise to impart best practice recommendations for all facets and phases of your journey, combined with robust processes to keep you on track.

## Risk Reduction, Governance, Compliance & Security

We bring our unique "controlled empowerment" methodology to minimize risk, to meet regulations & compliance, adhere to governance standards while promoting user empowerment.

# Business Intelligence Projects Survey Results

In 2018, we conducted a survey of 120 Business Intelligence & Analytics projects to understand more about successes and failures. Here are some of the insights:

73% of respondents consider an external BI strategy partner essential

51% of projects fell short of the company objectives

93% of respondents rated governance as a major concern

69% of BI leaders consider their projects currently at risk of failure

"I would highly recommend the program for any large complex company that is embarking on enterprise analytics and planning"

Khaled Chowdhury-Director Analytics & Business Intelligence  
Cabot Micro Electronics

"Having an experienced partner to guide us was invaluable, saving us not only time but also hard dollars"

Sean Unwin-Chief Financial Officer  
Geocon Group

"The expertise of the trainers and consultants coupled with real-world experience set them apart"

Orlando Saez-Chief Executive Officer  
Aker
